# ABOUT UIR

## INTRODUCTION

The Utility Installation Review (UIR) system is a web-based system that automates the submission, review, approval, inspection, and post-construction processing of utility installation requests on the state right of way (ROW). At the Texas Department of Transportation (TxDOT), a utility installation request is also called a notice of proposed installation (NOPI). UIR includes user interfaces for installation owners and TxDOT officials. The installation owner interface enables users to:

- prepare and submit installation requests online,
- track and respond to requests from TxDOT in connection with their installation requests,
- select and view historical installation request data (limited to requests submitted by the installation owner),
- manage installation owner user accounts (depending on privilege level), and
- generate queries and tabular and/or map-based reports.

The TxDOT interface enables TxDOT users to:

- review and forward installation requests to relevant stakeholders (other TxDOT users and installation owner request applicants),
- approve or reject pending installation requests,
- document the construction inspection process,
- select and view historical installation request data from all installation owners,
- manage installation owner and TxDOT accounts, and
- generate queries and tabular and/or map-based reports.

Access to UIR for installation owner users and TxDOT users depends on the role that individual users play on the utility installation process and their UIR account status and privilege level.

This manual is a printable version of the online help system that is available through the UIR web site. As needed, this manual uses the following special text style conventions:

- In reference to the UIR online help system:
  - Underlined Blue Text: Installation owner help system hyperlink (underlined)
  - Underlined Red Text: TxDOT help system hyperlink (underlined)
- In reference to the UIR user interface:
  - **Blue Text**: Installation owner user interface hyperlink (not underlined)
  - **Red Text**: TxDOT user interface hyperlink (not underlined)
  - **Bold Text**: UIR interface button
  - “Text in double quotes:” Browser menu option (usually accompanied by an instruction to select a menu option)

## UTILITY INSTALLATION REQUEST WORKFLOW

Using UIR to document the installation of utility facilities on the state ROW is a five-phase process.

*Submitting.* The installation owner user submits a utility installation request online (also called notice of proposed installation). As part of the process, the user provides detailed information about the proposed installation; uploads and generates portable document format (PDF) versions of plans, schematics, and other supporting documents; and locates the proposed installation on an interactive map. After submitting the request, UIR sends an email to designated TxDOT district officials to alert them about the new submission.

*Reviewing.* TxDOT district officials review the feasibility of the proposed installation. Depending on the case, the review might involve routing the proposal to area offices, maintenance sections, and other offices, as well as interaction with the installation owner user to gather additional and/or revised documentation. The outcome of this process is a recommendation to approve or reject the proposal. Every time a user routes the request to another user, UIR sends an automated reminder email to the recipient.

*Approval/Pre-construction.* A designated TxDOT official approves the proposed installation and routes the approval form along with any relevant special provisions to the installation owner user for further processing. At least 2 business days prior to starting construction, the installation owner user (or another duly authorized installation owner user) uses UIR to notify TxDOT that construction is about to commence. UIR sends an email to the designated TxDOT inspector who then coordinates with the installation owner user details such as construction schedule and traffic control plans.

*Construction.* The installation owner proceeds with the construction of the utility installation. TxDOT officials conduct field inspections to verify compliance with the proposed documentation and relevant specifications and regulations. This process ends when the TxDOT inspector notifies the utility permit office that construction has ended, indicating whether there were changes between approved and actual alignments. During the construction phase, if warranted, the TxDOT inspector could stop the construction and require the installation owner to submit amendment requests online to address major unexpected situations encountered during construction.

*Post-construction.* After the TxDOT field inspector notifies the district utility permit office that construction has ended, this office requests the installation owner to submit an as-built certification online. After the submission and review of the as-built certification, the utility permit office archives the completed request.

Each installation request is different and can involve many different steps, requirements, and review by a large number of stakeholders. Pages 5 and 6 show a detailed view of the installation request workflow diagram.

## **ADDITIONAL INFORMATION**

The Utility Accommodation Rules (UAR) and the TxDOT Utility Manual govern the accommodation of utility facilities on the state highway ROW (1, 2). The rules and guidelines are the result of a federal mandate that requires states to submit a statement to the Federal Highway Administration (FHWA) documenting the following information:

- authority of utilities to use and occupy the state highway ROW,
- power of the state department of transportation (DOT) to regulate such use, and
- policies the state DOT uses for accommodating utilities within the ROW of federal aid highways under its jurisdiction (3).

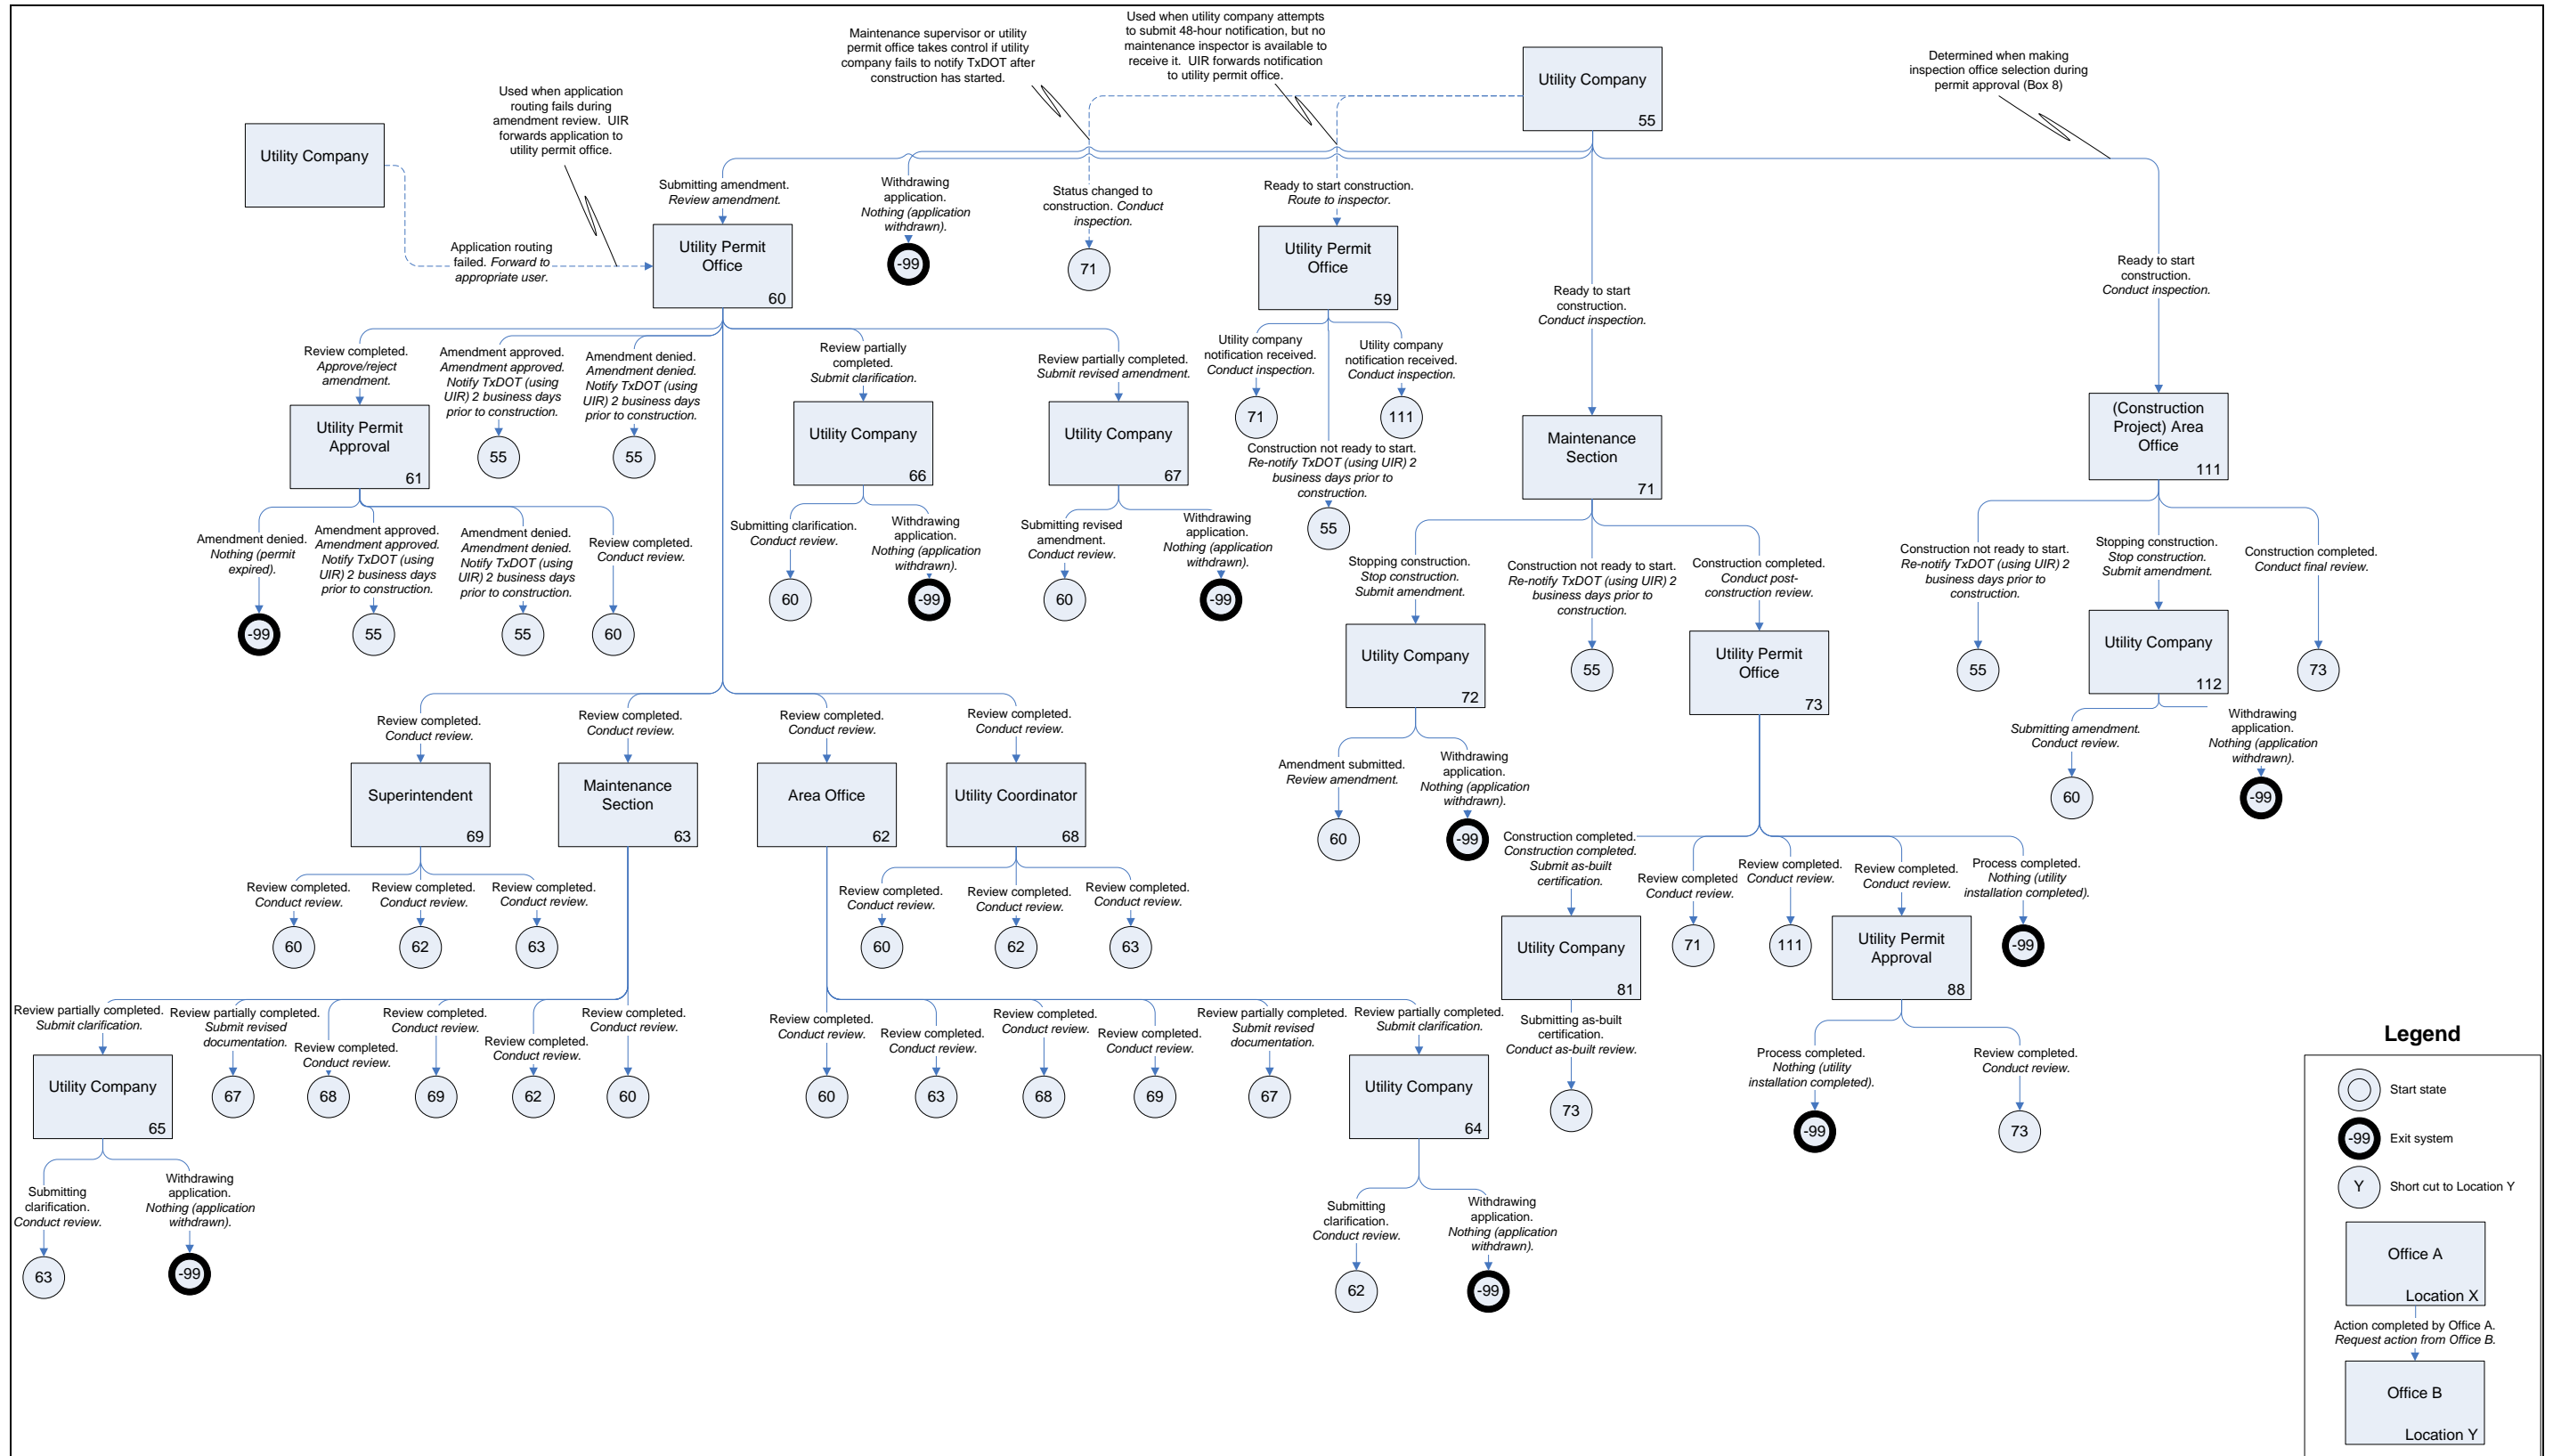

The rules, which can be traced to utility accommodation policies and guides the American Association of State Highway and Transportation Officials (AASHTO) developed, prescribe minimums relative to the accommodation, location, installation, adjustment, and maintenance of utility facilities within the state ROW (4, 5). However, the rules also establish that where industry standards or governmental codes, orders, or laws require utilities to provide a higher degree of protection than provided in the UAR, such regulations and laws take precedence (1). At TxDOT, a number of documents provide additional information regarding specific requirements that might affect utility installations on the ROW, including standard and special construction specifications, special provisions, and survey standards (6, 7).

# ACCESSING UIR

## CLIENT SYSTEM REQUIREMENTS

To use UIR, use a desktop or laptop computer with at least the following specifications:

- Windows® XP with Service Pack 2 (SP2),
- 256 MB of RAM,
- Microsoft® Internet Explorer® (IE) 6.0 with SP2,
- PDF reader such as Adobe Acrobat Reader® 6.0, and
- Internet connection.

There is no need to install any special client-side software to run UIR. However, you will need a valid, active UIR account to access the system and an email address to receive automated alert emails from the system.

UIR runs on Internet Explorer web browsers (at least version 6 SP2). UIR does not run properly on non-IE browsers (such as Mozilla Firefox®).

## LOGIN TO UIR

At the UIR Installation Owner User Login page, enter your UIR login ID and password and click **Login**.

Forgot your password? [Click here to retrieve it](#)

[Note about Cookies, Outlook, and Printing with Internet Explorer](#) [UIR Help](#)

## NEW USER REGISTRATION

UIR assumes the following installation owner structure:

- An installation owner may be composed of multiple offices, which do not necessarily coincide with TxDOT district boundaries. Examples of offices include regional divisions, marketing areas, service centers, city departments, and utility district offices.

- For each office, there may be one or more administrators, users, consultants, and guests. By default, the first user who creates an office account in UIR is an administrator. Before that user can use his/her account, a TxDOT official needs to validate it and approve it.
- Office administrators have the responsibility to manage the office account, which includes adding and/or deleting user accounts, consultant accounts, and guest accounts.
- Administrators and users can submit installation requests to TxDOT. Consultants can assist with the preparation of installation requests (including responses to TxDOT) but cannot submit those installation requests to TxDOT.

To create an office account (and create the first administrator account):

- At the UIR Installation Owner User Login page, click [Click here to register](#) and follow the instructions. Note: If your office already exists in the UIR database, DO NOT use this procedure. Instead, ask a designated UIR installation owner office administrator to create an account for you.

**UIR User Acknowledgments and Responsibilities**

- As a regular UIR account holder ("User" or "Administrator" privilege level), you are a duly authorized representative of an agency that owns utility installations in the state right of way (ROW) who has the authority to submit and coordinate utility installation requests. Submission and/or coordination of installation requests in the state ROW by a regular UIR account holder commits the authorizing agency to all responsibilities and liabilities under state law in connection with the design, construction, operation, and maintenance of such installations. Account holders with a "Consultant" privilege level may be given restricted access to UIR, including the ability to prepare, but not submit, installation requests on behalf of the agency. TxDOT reserves the right to request a written certification from the agency documenting the authority given to the UIR account user to act as a duly authorized agency representative.
- As a regular UIR account holder, you can use this web site to prepare, submit, and track utility installation requests. You agree to provide all necessary data, justification, and files needed to generate online versions of the Notice of Proposed Installation (NOP) form and to facilitate a thorough review and assessment of feasibility of the proposed installation within the state right of way by TxDOT. All utility installations must comply with existing rules and regulations, including the [Utility Accommodations Rules](#) and applicable specifications and special provisions attached to NOP approval forms.
- UIR enables you to upload drawings and other documentation depicting the location of existing and proposed installations in a variety of [supported file formats](#). To facilitate the review and document archival process, UIR generates PDF versions of files uploaded through the UIR interface. It is your responsibility to review each PDF file generated to ensure all pages are legible (including line work, labels, annotations, and dimensions) and every sheet prints completely, correctly, and is legible on 11x17 inch paper. To ensure legibility, the minimum acceptable font size on 11x17 inch paper prints is 8 points (a point is roughly equivalent to 1/72 of an inch).

I do not agree

**New Installation Owner/Office Registration Form**

Select the appropriate account type

New user account in existing office. An Administrator needs to log in and use the Manage Accounts menu option to add new users. [Click here to exit.](#)  
 New consultant account in existing office. An Administrator needs to log in and use the Manage Accounts menu option to add new consultants. [Click here to exit.](#)  
 New office record (i.e., a previous installation owner record exists in the database, but it is necessary to add a new office).  
 New installation owner record (i.e., there is no previous record for the agency in the database). Hint: Under Accounts, click Installation Owner Contacts to verify whether your agency already exists in the database.

The registration form on the following page applies. After submitting the completed form, TxDOT will review the account request and will notify you by email. If approved, your account will become active, you will become the administrator for the new office account, and you will be responsible for managing (including adding) user accounts within the same office. You can designate one or more users within the same office as additional administrators.

I agree Continue  
 I do not agree

- Provide installation owner, “home” TxDOT district, office, contact, and security information.
  - Verify whether the installation owner is already listed in the database. If a record already exists, DO NOT enter the name again. Instead, select the installation owner name from the drop down menu.
  - The “home” TxDOT district is the district where you will register the new office account. Notice that you can submit installation requests to any active district, regardless of your “home” district.

**Create/Edit New User Account**

## PASSWORD AND LOGIN ID RETRIEVAL

If you forgot your password, there are three options to retrieve it:

- At the UIR Installation Owner User Login page, click [Click here to retrieve it](#). Then provide your login ID and click **Email My Password**. Internally, UIR resets your password to a temporary password.
- Ask a designated office administrator to login and generate a new temporary password (system generated or typed) by editing your account under [Manage Accounts](#).
- If an office administrator is not available, contact the TxDOT district utility permit office and request a temporary password. TxDOT can generate a new temporary password (system generated or typed) by editing your account under [Manage Installation Owner Accounts](#).

In all cases, UIR will send the new temporary password to the email address associated with the login ID. The next time you login, UIR will ask you change that temporary password to a more permanent password.

If you forgot your login ID, there are two options to retrieve it:

- Ask a designated office administrator to login and look up your login ID under [Manage Accounts](#).
- If an office administrator is not available, contact the TxDOT district utility permit office. TxDOT can look up your login ID under [Manage Installation Owner Accounts](#).

## **COOKIES, OUTLOOK, AND PRINTING WITH INTERNET EXPLORER**

UIR uses session objects as a way to "link" all the pages opened by the user within the same session. The server automatically generates a session object in response to a user request to start a session. Before you can log in, make sure your browser is set to enable per-session cookies. After you close the browser or when the session expires (after 60 minutes of inactivity), the server will automatically delete the session object. To enable per-session cookies in Internet Explorer, go to **Tools > Internet Options > Privacy** and move the slider to **Medium**.

If you use Microsoft Outlook, disable the option to remove extra line breaks to prevent different lines from displaying in the same row. You can do this in Outlook by going to **Tools > Options > Preferences > Email Options**.

If you use Microsoft Internet Explorer, make sure the browser is set to print background colors and images. In Internet Explorer, go to **Tools > Internet Options > Advanced** and, under "Printing," check the "Print background colors and images" option.

# NAVIGATING UIR

## SCREEN STRUCTURE AND MENU OPTIONS

Most UIR screens use the following structure:

- *Basic navigation.* This area, at the top of the user interface, includes [Home](#) (i.e., the user’s “home” page, which lists the user’s active requests), the user’s name and login ID, and [Logout](#).
- *Menu.* This area includes the menu options available to the user, which may vary depending on the user’s account privilege level.
- *Main information area.* The content displayed depends on the menu option the user selects.

The following is a description of the possible menu options and what function they serve.

- Installation Requests:
  - [New Request](#) enables the user to submit a new installation request.
  - [My Requests](#) displays the user’s active requests (same as [Home](#)).

- [My Office Requests](#) shows a list of active requests from all the users associated with the user's office.
- [My Inst. Owner Requests](#) shows a list of active requests from all the offices registered at the same TxDOT district office.
- [Closed Requests](#) shows closed requests, grouped into three categories: My Closed Requests, Office Requests, and Installation Owner Requests.
- Accounts:
  - [My Account](#) displays user profile information.
  - [TxDOT Contacts](#) shows a list of TxDOT officials who may be involved in the installation review process.
  - [Installation Owner Contacts](#) shows a list of installation owners, offices, and registered UIR users.
  - [Manage Accounts](#) enables an administrator to manage user accounts.
  - [UIR User Responsibilities](#) includes a summary of basic UIR user acknowledgments and responsibilities.
- Reports
  - [Reports](#) enables the user to generate reports using a general-purpose query engine.
  - [Map](#) displays an interactive map of the state and includes installation request display and query capabilities.
- Other Resources
  - [Special Provisions](#) displays special provisions that TxDOT attaches to installation request approval forms.
  - [Request Checklist](#) displays questions that installation owner users must answer when they submit installation requests.
  - [Feedback](#) enables users to provide comments and suggestions on how to improve UIR.
  - [UIR Help](#) opens a new browser window that shows the interactive UIR online help system.
  - [TxDOT Manuals](#) opens a new browser window that lists TxDOT manuals that are available online.
  - [Utility Accommodation Rules](#) opens a new browser window that lists the Utility Accommodation Rules in Texas.
  - [TxDOT Standard Specifications](#) opens a new browser window that enables users to search standard construction specifications at TxDOT.
  - [Texas Manual on Uniform Traffic Control Devices](#) opens a new browser window that points to the online version of the Texas Manual on Uniform Traffic Control Devices.
  - [TxDOT Traffic Engineering Standard Plan Sheets](#) opens a new browser window that points to standard traffic control plan sheets at TxDOT.
  - [Utility Listings](#) opens a new browser window that lists utility regulatory agencies in Texas along with listings of registered utility owners and operators.
  - [ROW Maps](#) opens a new browser window that points to the ROW Maps application at TxDOT.
  - [Survey Control Points](#) opens a new browser window that points to the Survey Control Point application at TxDOT.

## INSTALLATION REQUESTS

### New Request

New Request enables the user to submit a new installation request. See [Submitting and Processing Requests](#) for more information.

### My Requests

[My Requests](#) displays the user's active requests (same as [Home](#)).

- Click [My Requests](#) in the Installation Requests menu box. This view shows four types of requests:
  - *New Incomplete Requests*. This list includes requests that the user is preparing but has not yet submitted to TxDOT. The user has completed at least one of the six steps in the process to submit the request to TxDOT. Note: Clicking **×** permanently deletes an incomplete request from UIR. This operation is irreversible.
  - *Incomplete Responses to TxDOT*. This list includes requests for which the user (or another duly authorized installation owner representative in the same office) is preparing a response to TxDOT. The user has completed at least one of the six steps in the process to submit the response to TxDOT. Note: Clicking **×** only deletes the incomplete response to TxDOT from the database, not the overall request (which remains in the database).
  - *Requests Currently at Installation Owner*. This list includes requests for which there is a pending action by the installation owner user.
  - *Requests Currently at TxDOT*. This list includes requests for which there is a pending action by TxDOT.
- To view a specific installation request, click the corresponding installation request number.
- Clicking any column header sorts the selected table alphabetically according to that column (first in ascending order and then in descending order).

If the user does not have requests in the system, the interface displays the following:

### My Office Requests

[My Office Requests](#) shows a list of active requests from all the users associated with the user's office.

- Click [My Office Requests](#) in the Installation Requests menu box. This view shows a listing of the number of requests for each office user, grouped into three columns:
  - *Requests currently at TxDOT*. This column displays the number of requests for which there is a pending action by TxDOT.
  - *Requests Currently at Installation Owner*. This column displays the number of requests for which there is a pending action by the installation owner user.
  - *Incomplete Requests/Responses*. This column displays the combined number of new incomplete requests and incomplete responses to TxDOT.
- Click any number to display a list of requests associated with a specific user/request location combination. To view a specific installation request, click the corresponding installation request number.
- Clicking any column header sorts the selected table alphabetically according to that column (first in ascending order and then in descending order).
- Use the search tool to find requests that meet specific criteria (e.g., by installation request number, applicant name, highway, control section, submission date, approval date, or last event date).
  - The search tool accepts partial text entries. For example, type “1234” when searching by installation request number to retrieve all installation requests that include “1234” anywhere in the number. Similarly, type “james” when searching by applicant name to retrieve all installation requests submitted by any user in the same office whose first or last name includes the string “james.”

## My Installation Owner Requests

[My Installation Owner Requests](#) shows a list of active requests from all the offices registered at the same TxDOT district office.

- Click [My Inst. Owner Requests](#) in the Installation Requests menu box. This view shows a listing of the number of requests for each office, grouped into two columns:
  - *Requests currently at TxDOT*. This column displays the number of requests for which there is a pending action by TxDOT.
  - *Requests Currently at Installation Owner*. This column displays the number of requests for which there is a pending action by the installation owner user.
- Click any number to display a list of requests associated with a specific office/request location combination. To view a specific installation request, click the corresponding installation request number.
- Clicking any column header sorts the selected table alphabetically according to that column (first in ascending order and then in descending order).

- Use the search tool to find requests that meet specific criteria (e.g., by installation request number, applicant name, highway, control section, submission date, approval date, or last event date).
  - The search tool accepts partial text entries. For example, type “1234” when searching by installation request number to retrieve all installation requests that include “1234” anywhere in the number. Similarly, type “james” when searching by applicant name to retrieve all installation requests submitted by any user in the same office whose first or last name includes the string “james.”

## Closed Requests

[Closed Requests](#) shows closed requests, grouped into three categories: My closed requests, office requests, and installation owner requests.

- Click [Closed Requests](#) in the Installation Requests menu box. This view shows a listing of the number of requests for each category, grouped into two columns:
  - *Requests currently at TxDOT*. This column displays the number of closed requests at TxDOT (which, by default, is any closed request).
  - *Requests Currently at Installation Owner*. This column displays the number of closed requests at the installation owner (which, by default, is always zero).
- Click **My Requests** to show the number of closed requests associated with the user.
- Click **Office Requests** to show the list of the number of closed requests associated with each user in the office.
- Click **Inst. Owner Requests** to show the list of the number of closed requests associated with each office registered in the same TxDOT district.
- Click any number to display a list of requests associated with a specific office/request location combination. To view a specific installation request, click the corresponding installation request number.
- Clicking any column header sorts the selected table alphabetically according to that column (first in ascending order and then in descending order).
- Use the search tool to find closed requests that meet specific criteria (e.g., by installation request number, applicant name, highway, control section, submission date, approval date, or last event date).
  - The search tool accepts partial text entries. For example, type “1234” when searching by installation request number to retrieve all closed requests that include “1234” anywhere in the number. Similarly, type “james” when searching by applicant name to retrieve all closed requests submitted by any user in the same office whose first or last name includes the string “james.”

## ACCOUNTS

### Account Status

The account status determines whether a user can login to UIR and can be one of the following:

- *Active.* An active user can login to UIR.
- *Inactive.* An inactive user cannot login to UIR (intended to be on a short-term basis).
- *Out of Office.* An out-of-office user is inaccessible (i.e., UIR cannot route requests to that user). The user can login at any time and change the status.
- *Permanently Inactive.* A permanently inactive user cannot login to UIR (intended to be on a long-term basis).

### Account Privilege Level

The account privilege level determines the level of access an active user has. The privilege level can be one of the following: Administrator, User, Consultant, and Guest. The following table summarizes the various levels of access for each privilege level.

Function	Administrator	User	Consultant	Guest
Prepare installation request	X	X	X	
Submit installation request	X	X		
View installation request	X	X	X	X

## Manage Accounts

- Click [Manage Accounts](#) in the Accounts menu box to view the list of users associated with the office. The view also shows the list of all installation owner offices registered at UIR.
- Clicking any column header in the user and office tables sorts the selected table alphabetically according to that column (first in ascending order and then in descending order).
- To change the installation owner or office names, click the corresponding **Change** button, make the change, and then confirm or reject the change.

**Create New User Account** [\[Show/Hide\]](#)

**Existing Installation Owner Users**

Name	Date of Registration	Title	User Status	User Privileges

## UIR User Responsibilities

- Click [UIR User Responsibilities](#) in the Accounts menu box to view a summary of acknowledgments and responsibilities that apply to all registered installation owner users.
- Office administrators are responsible for ensuring that all registered office users have read and understand their responsibilities as UIR users.

## REPORTS

### Reports

The current version of UIR supports three types of reports:

- *Installation Request Listing.* This report provides a list of requests and basic related attribute data.
- *Performance Measures.* This report provides a summary of installation request performance data (essentially, number of days that an installation request spends between major milestones).
- *Totals.* This report provides a summary of the number of installation requests according to criteria such as installation owner, applicant name, route, and control section.

To generate a report:

- Select [Reports](#) from the Reports menu.
- Select the TxDOT district. By default, UIR shows the installation owner office's "home" district.
- Select whether to retrieve "All Installation Requests" or one specific installation request.
- Select additional query parameters (which apply if the user selected "All Installation Requests"). Note: Installation owners cannot view installation request data associated with other installation owners.

Reports	
Select TxDOT District	
District	San Antonio District
Select Installation Request	
Installation Request No.	--- All Installation Requests ---
Applicant Name	--- All Applicant Names ---
Installation Owner	UIR Utility Testing Company
Installation Class	--- All Installation Classes ---
Route	--- All Route Numbers ---
Control Section	--- All Control Sections ---
Area Office	--- All Area Offices ---
Maintenance Section	--- All Maintenance Sections ---
County	--- All Counties ---
Request Status	Closed Requests
Currently At	--- All Office Types ---
NOPI Submitted	Date
From:	November 20 2007
To:	November 25 2007

- Select the report type (Installation Request Listing, Performance Measures, or Totals).
- Select the fields to display in the report.
- Click **Generate Report**. A new browser window displays the results. Note: The number of seconds it takes to display the query results depends primarily on the type of report and query parameters. In general, the fastest report to display is Totals. The slowest report to generate is Performance Measures.

- If needed, click **Export to .csv** to display the report results in comma-delimited format. By default, UIR opens a separate browser window to display the results in Excel.

## Map

The map enables users to display the location of installation requests on an interactive map. The map includes the following tools to navigate and retrieve information:

Tool	Name	Description
	Location	The <b>Location</b> tool enables users to place the location of a proposed installation request on the map. This tool is only accessible to installation owner users while submitting requests (Step 4).
	Overview	The <b>Overview</b> tool displays a clickable thumbnail view of the state. Clicking the tool again turns the thumbnail view off.
	Table of Contents	The Table of Contents ( <b>TOC</b> ) tool displays the list of layers that make up the map. Clicking the tool again turns the TOC off. The TOC includes three columns: <ul style="list-style-type: none"> <li>• Visible. This column shows which layers are visible at the current zoom level.</li> <li>• Active. This column shows whether a layer is active (for use with the Identify tool).</li> <li>• Name. This column shows the layer name.</li> </ul>
	Zoom In	The <b>Zoom In</b> tool enables users to zoom into the map. This tool is the default tool when users load a map. To zoom in: <ul style="list-style-type: none"> <li>• Click anywhere on the map.</li> <li>• Click and drag over an area (i.e., draw a box).</li> </ul>
	Zoom Out	The <b>Zoom Out</b> tool enables users to zoom out. To zoom out: <ul style="list-style-type: none"> <li>• Click anywhere on the map.</li> <li>• Click and drag over an area (i.e., draw a box).</li> </ul>
	Zoom Full	The <b>Zoom Full</b> tool zooms out to display the full extent of the map (by default the state of Texas).
	Zoom to Active	The <b>Zoom to Active</b> tool zooms out to display the extent of the active layer.
	Pan	The <b>Pan</b> tool enables users to move the map in a direction. To pan, click and hold down the left mouse button and drag the cursor in the desired direction. Note: The four map arrows (north, east, south, and west) also enable the map to move. For example, to move the map to the east, click the eastbound arrow.
	Identify	The <b>Identify</b> tool enables users to query active layers. To query a layer: <ul style="list-style-type: none"> <li>• Select an active layer (see Table of Contents above).</li> <li>• Click the <b>Identify</b> tool.</li> <li>• Click a feature of interest that belongs to the active layer. The system opens a table that displays attribute data associated with that specific feature.</li> </ul>
	Measure	The Measure tool enables users to measure distances on the map. To measure distances: <ul style="list-style-type: none"> <li>• Click the <b>Measure</b> tool. A box appears on the lower right corner of the map.</li> <li>• As needed, change the measurement units.</li> <li>• On the map, click the beginning point. A blue dot appears on the screen. Note: Do not drag the cursor.</li> <li>• After the blue dot appears on the screen, move the mouse to the end location and click again. A blue line connecting the two blue dots appears on the map. The distance between the two points appears in the measure box.</li> <li>• As needed, continue clicking other locations on the map to generate a chain. To measure distances along curves, use short chain legs. Note: The distance in the measure box corresponds to the cumulative chain length.</li> <li>• Click <b>Reset</b> to reset the measure tool.</li> </ul>
	Print	The <b>Print</b> tool enables users to send the current map view to a printer.
	UIR Search	The <b>UIR Search</b> tool enables users to select installation requests according to pre-specified query criteria and place the corresponding installation request locations on the map. Using the <b>Identify</b> tool in conjunction with the <b>UIR Search</b> tool enables users to query individual installation request locations and gather relevant data and documentation. For more information on how to specify query criteria parameters, see <a href="#">Reports</a> .
n/a	Right Click	Clicking the map with the right mouse button displays a menu of options that include copying, saving, printing, and emailing the map image. In the current version of UIR, the map image is in portable network graphic (PNG) format.

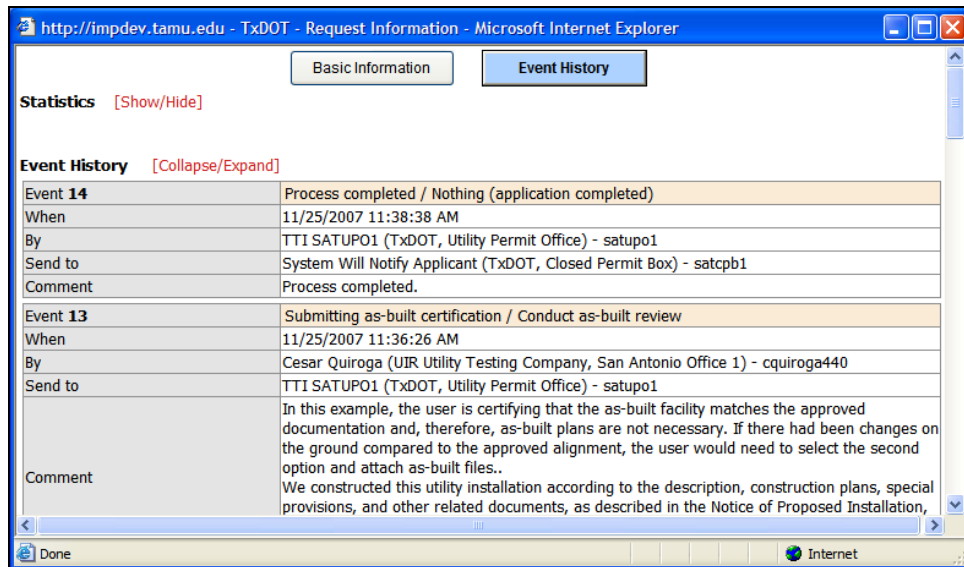

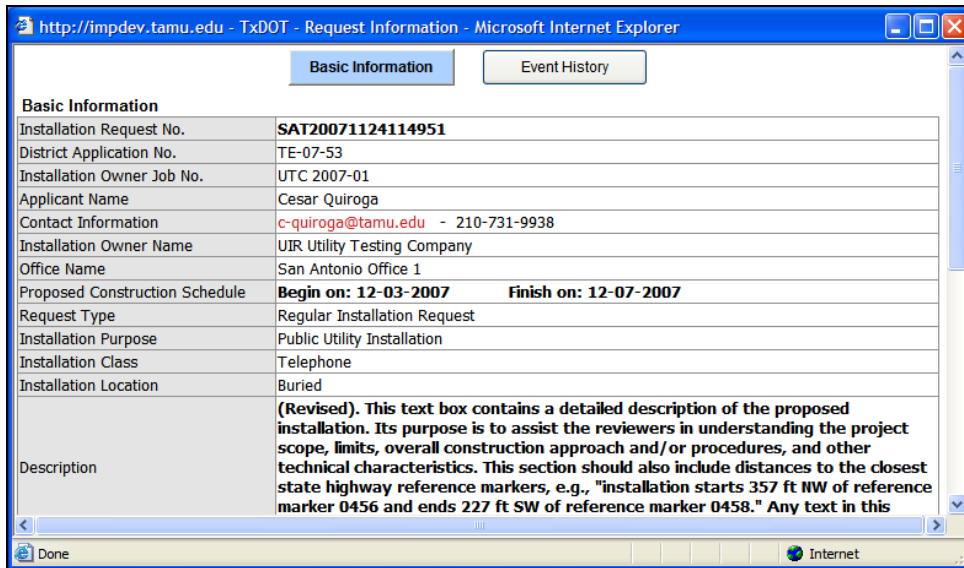

To run a UIR search:

- Click the **UIR Search** tool.
- Select the TxDOT district. By default, UIR shows the installation owner office's "home" district.
- Select whether to retrieve "All Installation Requests" or one specific installation request.
- Select additional query parameters (which apply if the user selected "All Installation Requests"). Note: Installation owners cannot view installation request data associated with other installation owners.
- Click **Submit Query**. If the results of the query are positive (i.e., the query retrieves installation requests), the map shows the corresponding locations on the screen. Note: It may be necessary to zoom out or pan the map to find the locations where the map shows the installation request locations.

- To query each installation request location:
  - Using the TOC tool, make sure UIR Search is the active layer. Note: The rectangular icon next to the UIR Search layer name is clickable and enables users to select the label to be associated with individual locations on the map (request number, district application number, installation owner job number, and none).

- Using the Identify tool, click any installation request location. A separate window opens, which displays basic information (including links to relevant documents) and the event history associated with that installation request.

## OTHER RESOURCES

### Special Provisions

- Click [Special Provisions](#) to display a list of special provisions that routinely apply at the “home” TxDOT district.
- Select a different district to view the list of special provisions that pertain to that district.

Special Provisions in San Antonio District						
Title	File Name	PDF	From	To	Uploaded	Status
San Antonio District Special Provisions	SAT_SpecialProvision_6.doc		11-02-2006		Dan Stacks	Active
Inspector Map	SAT_SpecialProvision_7.jpg		07-30-2007		Diane Guerrero	Active

### Request Checklist

- Click [Request Checklist](#) to display a list of checklist questions that routinely apply at the “home” TxDOT district.
- Select a different district to view the list of checklist questions that pertain to that district.

Request checklist in San Antonio District					
ID	Order	Question	From	To	Status
1	1	Is the location and identification (highway number) of the TxDOT highway clearly indicated on the plans?	09-13-2005		Active
2	2	Are the utility plans legible, drawn to scale, and accurately dimensioned?	09-13-2005		Active
3	3	Is the location of the proposed utility line clearly shown on the plans?	09-13-2005		Active
4	4	Are other existing utility lines in the vicinity shown on the plans?	09-13-2005		Active
5	5	Are the right of way line and edge of highway pavement clearly shown on plans?	09-13-2005		Active
6	6	For lines to be installed parallel to the highway, is the distance from the right of way line and from the edge of highway pavement clearly shown?	09-13-2005		Active
7	7	For installations parallel to the highway, does the installation alignment change? Alignment changes need to be justified and reasonable.	09-13-2005		Active
10	8	Are appropriate temporary erosion control devices (e.g., rock berms, silt fences) shown where the line will be across/along a creek, drainage way, steep slope, within the Edwards Aquifer Recharge Zone, or in other critical areas?	09-13-2005		Active
11	9	For aerial installations, do the plans clearly show and differentiate between existing poles and new poles?	09-13-2005		Active
8	10	For highway crossings, is the location of the crossing clearly shown on the plans? The crossing should be as close to 90 degrees as practical.	09-13-2005		Active
9	11	For lines crossing the highway, crossing intersecting streets/county roads, or passing through the protected root area of desirable trees, is it clearly shown that the line will be installed by boring? In addition, casing should be shown under highways and paved city street/county road intersections.	09-13-2005		Active

## Feedback

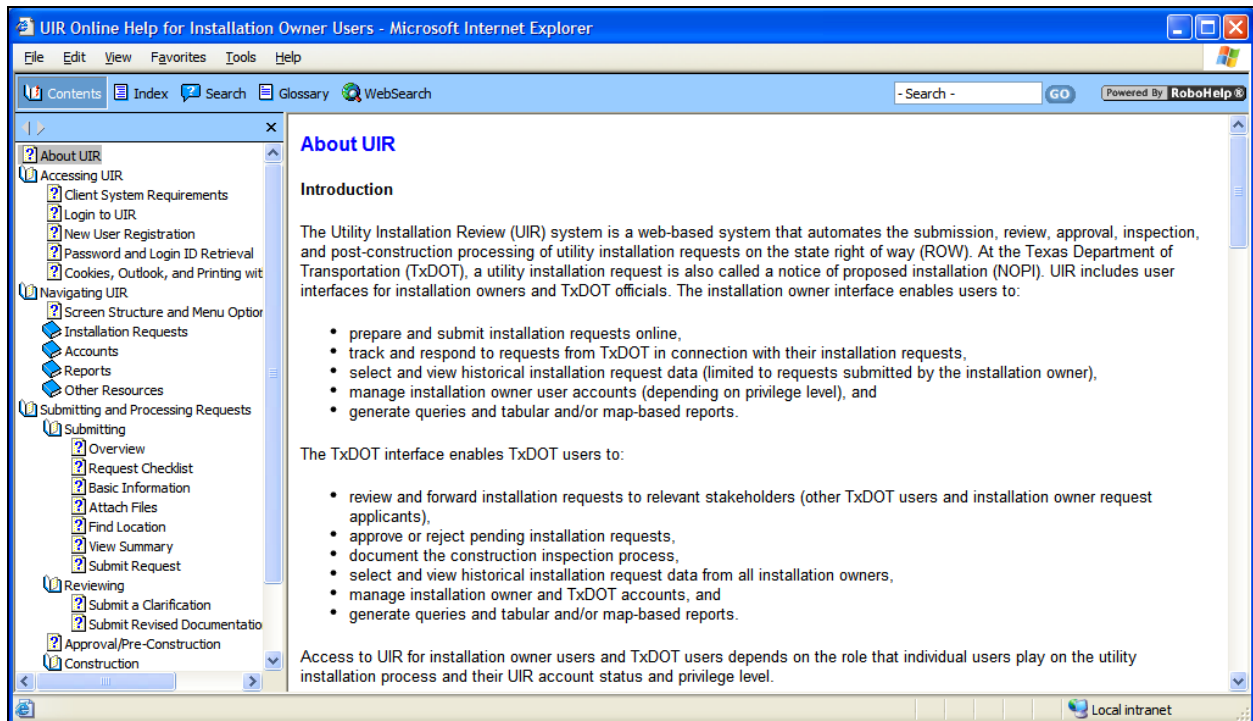

- Click [Feedback](#) to display a text form to provide feedback and suggestions on how to improve UIR.
- Type the comment and click **Send Feedback** to send the feedback to the “home” TxDOT district utility permit office and the UIR webmaster.

We appreciate your feedback !

Your message will be sent to TxDOT District Utility Permit Office and UIR's webmaster

## UIR Help

- Click [UIR Help](#) to display the interactive UIR help system.

## TxDOT Manuals

- Click [TxDOT Manuals](#) to open a new browser that displays all TxDOT manuals available on the Internet.
- Click a link to display the corresponding manual in PDF format. Right clicking enables the user to save a local copy of the PDF manual.

## ROW Maps

- Click [ROW Maps](#) to open a new browser window that points to the ROW Maps application at TxDOT.

The screenshot shows the Texas Department of Transportation website. At the top, there is a navigation bar with links for 'About Us', 'Careers', 'Local Information', 'News', 'Programs', and 'Services'. A search bar is also present. The main content area is titled 'TxDOT Right of Way Maps Application'. It includes a description of the application, a list of resources, and a section for Adobe Acrobat Reader. The resources list includes 'Right of Way', 'Acquisition Contracts', 'Forms', and 'Other Resources'. The Adobe Acrobat Reader section explains that the application is designed to serve images for all of the "Finalized" ROW maps for TxDOT, broken into 17 inch sections for roll maps and whole pages for flat maps. It also mentions that the Adobe Acrobat Reader is utilized to display the available maps in a spreadsheet format.

## Survey Control Points

- Click [Survey Control Points](#) to open a new browser window that points to the Survey Control Point application at TxDOT.

# SUBMITTING AND PROCESSING REQUESTS

## SUBMITTING

### Overview

Submitting a new installation request (or submitting a revised request) involves six steps:

- *Request checklist.* This step involves providing answers and comments in response to a series of questions designed to improve the quality of the documentation submission.
- *Basic information.* This step involves providing basic information about the proposed installation.
- *Attach files.* This step involves uploading supporting documentation to the server and converting the uploaded documents to PDF format.
- *Find location.* This step involves using an interactive map to place the location of the proposed installation on the map and extracting route, control section, area office, and maintenance section data from the map.
- *View summary.* This step involves reviewing the documentation provided in the previous steps.
- *Submit request.* This step involves generating the installation request document in PDF format and officially submitting the request to TxDOT.

### Request Checklist

This step involves providing answers and comments in response to a series of questions designed to improve the quality of the documentation submission.

- Click [New Request](#) in the Installation Requests menu box. By default, the request checklist appears on the screen. At any point during the submission process, clicking **1-Request Checklist** displays the list of checklist questions as well as answers and comments the user has provided and saved in Step 1.
- For each question, select the appropriate answer (Yes, No, N/A) and provide comments as needed to clarify the answer.
- When finished, click **Save and Continue** to go to the next step.

## Basic Information

This step involves providing basic information about the proposed installation.

- Provide the information requested in drop down lists and text boxes. Optional fields are clearly marked.
  - UIR automatically assigns a permanent unique ID to the installation request as a string composed of the three-letter “home” TxDOT district code and the date/time stamp when the user first completed Step 1. For example, SAT20071124114951 means San Antonio, November 24, 2007, and 11:49:51 AM.
  - If the user selects a district other than the “home” TxDOT district, UIR replaces the three-letter district code in the installation request number at the time of submission in Step 6.
- At any point during the submission process, clicking **2-Basic Information** displays the information the user has provided and saved in Step 1.
- When finished, click **Save and Continue** to go to the next step.

1-Request Checklist	2-Basic Information	3-Attach Files	4-Find Location	5-View Summary	6-Submit Request
<b>Provide basic information</b>					
Installation Request No.	SAT20071124114951				
Applicant Name	Cesar Quiroga				
Installation Owner Name	UIR Utility Testing Company				
Installation Office Name	San Antonio Office 1				
TxDOT District	San Antonio District				
Installation Owner Job No. [Optional]	UTC2007-01 Only letters, numbers and hyphen are allowed				
Request Type	Regular Installation Request <a href="#">Click here for definitions</a>				
Proposed Construction Schedule [Tentative]	Beginning: December 3 2007 Finishing: December 7 2007				
Installation Purpose	Public Utility Installation <a href="#">Click here for definitions</a>				
Installation Class	Telephone				
Installation Location	<input type="radio"/> Aerial <input checked="" type="radio"/> Buried <input type="radio"/> Aerial and Buried				
Description	<p>This text box contains a detailed description of the proposed installation. Its purpose is to assist the reviewers in understanding the project scope, limits, overall construction approach and/or procedures, and other technical characteristics. This section should also include distances to the closest state highway reference markers, e.g., "installation starts 357 ft NW of reference marker 0456 and ends 227 ft SW of reference marker 0458." Any text in this section appears on the first page of the installation request document.</p>				
Special Comments [Optional]	<p>This text box is used to provide additional relevant information, e.g., if this request is part of a large project that involves several requests (in this case, the user would list all installation request numbers: SAT20071120083012, SAT20071120100512, and so on).</p>				
Save and Continue					

## Attach Files

This step involves uploading supporting documentation to the server and converting the uploaded documents to PDF format. To upload a file:

- Click **Browse...** and navigate through the file structure to select the file to upload.

1-Request Checklist	2-Basic Information	3-Attach Files	4-Find Location	5-View Summary	6-Submit Request
<b>Select and attach files</b>					
Find File: T:\San2Share\5-2110-03\UIR Testing\Sample Files\Sample Microstation file1.dgn					Browse...

- For computer aided design (CAD) files, more specifically Microstation .dgn files and AutoCAD .dwg and .dxf files, UIR automatically resizes the original file page size to 11x17 inches when generating the corresponding PDF file. Regardless of format, when printed on 11x17 inch paper, all content must be readable and print correctly. In particular, all line work, labels, annotations, and dimensions should be of such size, height, width, color, and weight that they can be clearly legible when printing the PDF file in black and white on 11x17 inch paper.
- To ensure readability, the minimum acceptable printed font size is 8 points (approximately 1/9 of an inch in height). Note: One inch is roughly 72 points. Use larger text sizes if the text is in bold, the text uses narrow character styles, or if the line weight is larger than the minimum line weight (notice PDF conversion works best for text that uses the minimum line weight). Examples of acceptable text (larger text sizes are also acceptable) include the following:

**Sample text (point size: 16)**

Sample text (point size: 12)

Sample text (point size: 10)

Sample text (point size: 8)

Unacceptable text samples (notice some of the text is point size 8, but the selected font makes the text very difficult to read):

**Sample text (point size: 8)**  
*Sample text (point size: 8)*  
 Sample text (point size: 6)  
 Sample text (point size: 6)  
**Sample text (point size: 6)**  
**Sample text (point size: 6)**  
 Sample text (point size: 4)

- Typically, plan and profile drawings should include the following content:
  - location and identification (highway number) of the state highway,
  - location of the proposed utility installation,
  - location of existing utility installations in the vicinity of the proposed installation,
  - distances and clearances to other existing or proposed utility installations,
  - location of the state ROW line and edge of highway pavement,
  - distances from the ROW line or from edge of highway pavement,
  - location of adjacent crossing streets and other landmarks to uniquely identify the location of the proposed installation,
  - location of points used for ground control, and
  - map scale and orientation.
- Supporting documents such as Word documents can also include pictures and figures. Make sure that all graphical elements (both images and annotations) are readable and provide good contrast both on the screen and when printed in black and white. Take into consideration a variety of scenarios. For example, certain colors such as yellow may be difficult to see on a clear background. Likewise, colors such as red and green (which may display correctly on their own) tend to look alike when printed in black and white.

- Within the 5-file, 5-MB/file limit, users have considerable flexibility to upload the documentation needed to support the installation review process.
  - Some file formats (e.g., AutoCAD, PDF, and Microsoft Office file formats) enable the submission of multi-page documents, therefore lowering the total number of files to upload.
  - Only upload files that directly pertain to the portion of the proposed installation that affects the state ROW. Uploading files that might pertain to a county or other local jurisdiction is unnecessary and can impact your ability to stay within the 5-file, 5-MB/file limit.
- In the current version of UIR, it is necessary to upload one file at a time. Further, in the case of CAD files (Microstation or AutoCAD), UIR does not support the use of linked cells or other special font libraries, which may vary from agency to agency and cannot be

uploaded to UIR at the same time as the uploaded CAD file. To address this limitation, there are several options, including the following:

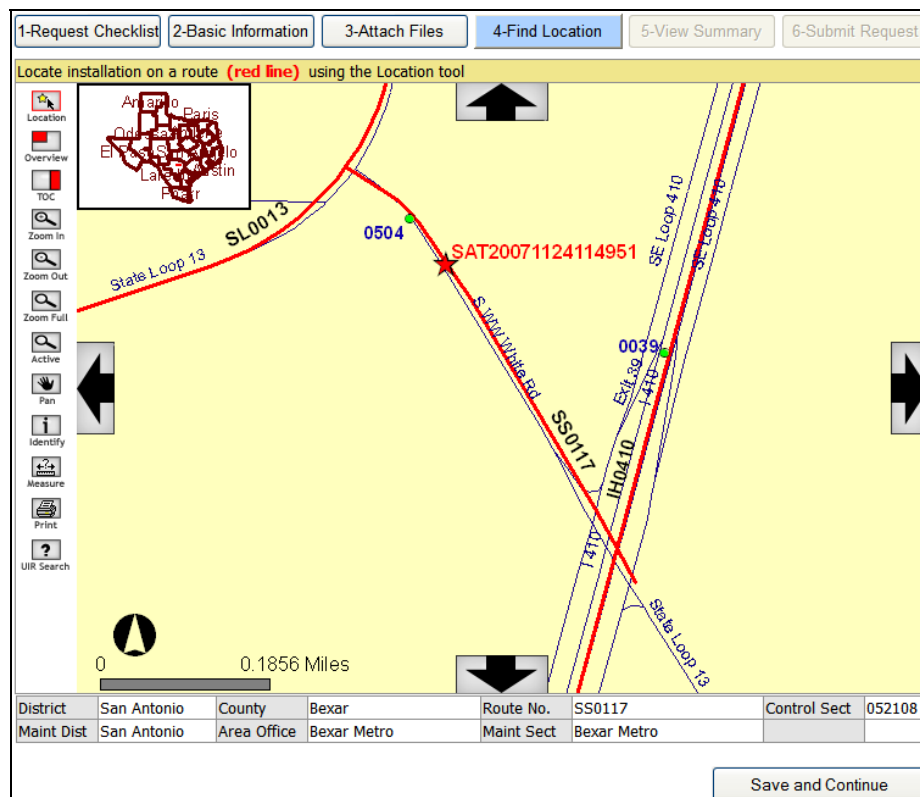

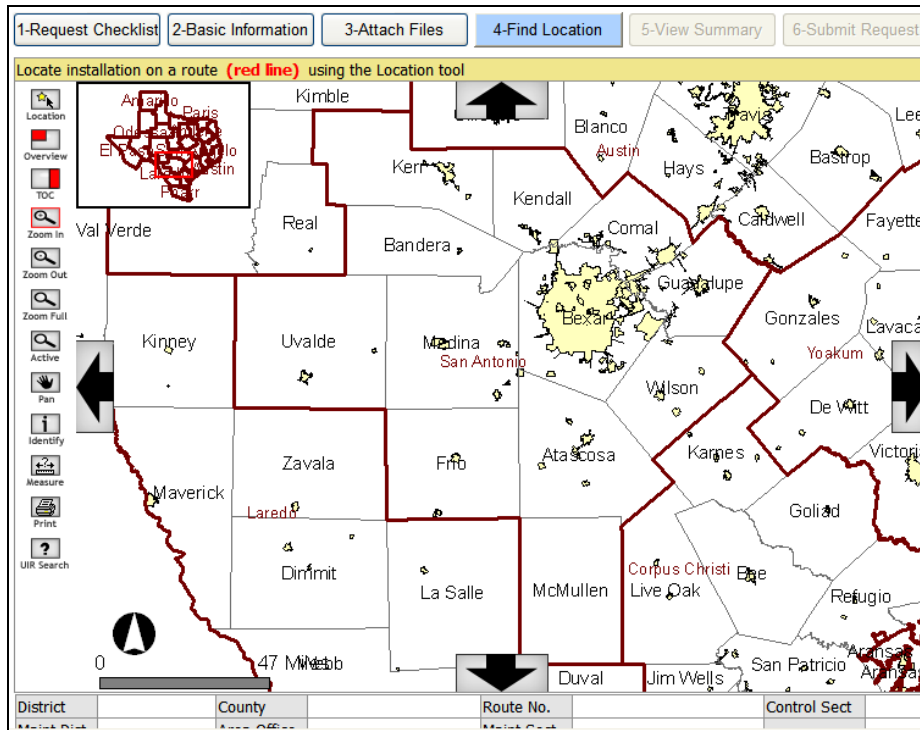

- Before uploading the CAD file to UIR, generate a plain-graphic CAD file where all the cells and other special graphical elements are converted to plain graphics.
- Convert the CAD file to PDF format and upload the PDF file to UIR.

## Find Location

This step involves using an interactive map to place the location of the proposed installation on the map and displaying the corresponding route, control section, area office, and maintenance section data. To place the location of the proposed installation on the map:

- Zoom in to the area where the proposed installation will take place. For detailed instructions on how to use the map tools, see [Map](#).
- Using the **Location** tool, click the map at the location of the proposed installation. After refreshing the display, UIR shows a red star at that location, along with the installation request number. At the bottom of the screen, the display also shows the result of a query that confirms the TxDOT district, county, route, control section, area office, and maintenance section associated with the location chosen. Note: Under normal circumstances, the district and the maintenance district are the same. The district and the maintenance district are different in certain boundary situations where a stretch of roadway belongs jurisdictionally to one TxDOT district but another district is responsible for its maintenance.
- If it is necessary to change the location of the red star, simply click the **Location** tool (or make sure this tool is the active tool—a red border designates the active tool) and click the map at the correct location.
- Click **Save and Continue** to go to the next step. Note: The **Save and Continue** button is not visible if the table at the bottom of the screen is not filled completely (meaning that UIR could not complete the query to confirm the district, county, route, control section, area office, and maintenance section).

Take into consideration the following map usage guidelines:

- In the current version of UIR, it is only possible to place one red star per installation request. In effect, the red star is a placeholder for the proposed installation.
  - For crossings, place the red star at the location where the proposed crossing intersects the TxDOT route centerline.
  - For longitudinal installations, place the red star at one end of the proposed installation and indicate in the description field in Step 2 where the other end is located.
- The map shows green dots that represent reference markers located on the state highway network. Reference markers are placed every mile on interstate highways and approximately every two miles or less on non-interstate highways. Using distances measured in the field with respect to actual reference marker locations (first priority) or distances measured on the map with respect to reference marker green dots, add a statement to the description in Step 2 regarding the relative location of the proposed installation with respect to the reference marker network. For example:
  - For crossings: “Crossing is located 340 feet southeast of reference marker 504 on SS 117.”
  - For longitudinal installations: “Installation begins 340 feet southeast of reference marker 504 and ends 995 feet southeast of reference marker 504.”
- Depending on the bandwidth and actual connection speed, the amount of time it takes to load and refresh the map could vary substantially. If the map does not load completely or keeps displaying a “Loading” animation for too long, press F5 to reload the map or, alternatively, click **3-Attach Files** and then **4-Find Location**. If the map still does not load after a few attempts, log out and try again later at a time when there is less Internet traffic.

## View Summary

This step involves reviewing the documentation provided in the previous steps.

- Review the information displayed on the screen for accuracy and completeness, including all relevant hyperlinks.
- If necessary, click a step button and edit the corresponding data accordingly.
- When finished, click **Continue** to go to the next step.

[Continue](#)

## Submit Request

This step involves generating the installation request document in PDF format and officially submitting the request to TxDOT. To submit the request:

- If applicable, select and/or add other individuals who should receive automated emails from UIR. Examples include consultants and utility contractors. Note: By default, the system sends emails to the user who submitted the request. In addition, notice that there is no need to add other registered UIR users from the same office because they already have the ability to log in and view all the requests submitted by all users from that office.

1-Request Checklist 2-Basic Information 3-Attach Files 4-Find Location 5-View Summary 6-Submit Request

Select users that should receive emails from UIR

For email recipients with UIR accounts, select existing user:

For email recipients without UIR accounts, select email address:

or type new email address:

Select type of email user(s) should receive

Email Recipient	Delete	Submissions to TxDOT	TxDOT Requests before Approval	TxDOT Approvals	48-hour Construction Notifications	TxDOT Requests during Construction	TxDOT Requests after Construction	Closed Requests
ajones@earthlink.net	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
jsmith@yahoo.com	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Select one of the following options

Edit Request  Click 1, 2, 3, or 4 above

Submit Application  After clicking Submit Request, the system will generate the request document in PDF format ( [click here for a preview](#) ) and will send emails to TxDOT officials and you. There is no need to send a separate, signed paper copy to TxDOT. You can download the PDF file for your own records.

I agree (You must check "I agree" to submit application)

- Click the check box and then click **Submit Application**. Note: The **Submit Application** button is not available to consultants. Consultants can help prepare, but not submit installation requests to TxDOT. Consultants should coordinate with their installation owner office contacts for the submission of installation requests to TxDOT.
- While the system is generating the installation request PDF document, the screen displays the approximate number of seconds that have passed. In general, it takes 15-30 seconds to complete the process, although the actual duration depends on a number of factors, including number and size of the attachment files as well as on the number of users who may be logged in at the same time and uploading and/or generating PDF files.

Please wait while UIR generates the Notice of Proposed Installation PDF file. This process usually takes less than a minute, depending on the number and size of the attachment files.

DO NOT CLOSE the browser window. Also, DO NOT CLICK anywhere on this browser until this message disappears. Otherwise, the PDF file will not be properly generated.

..... 15 seconds .....

- After completing the process, UIR changes the screen. Click [Notice of Proposed Installation](#) to view the PDF file. Alternatively, click **Return Home** to see the new installation request added to the list of requests currently at TxDOT. Note: The system displays an error message if it fails to generate the PDF file. In this case, follow the instructions on the screen. If the process fails again, contact the district utility permit office for assistance.

Thank you for using UIR.

Click here to open the [Notice of Proposed Installation \(NOPI\)](#) PDF file. Please print a copy of the file for your records.

You are strongly advised to log in to UIR on a regular basis to check on the status of the installation request. As a service to users, UIR sends automated emails during the review process, including initial application receipt, approval/rejection decision, or if there is a need for clarifications or additional documentation. Keep in mind, however, that email routing and delivery is an external process that UIR cannot control and, as a result, there is no guarantee you will receive emails from UIR.

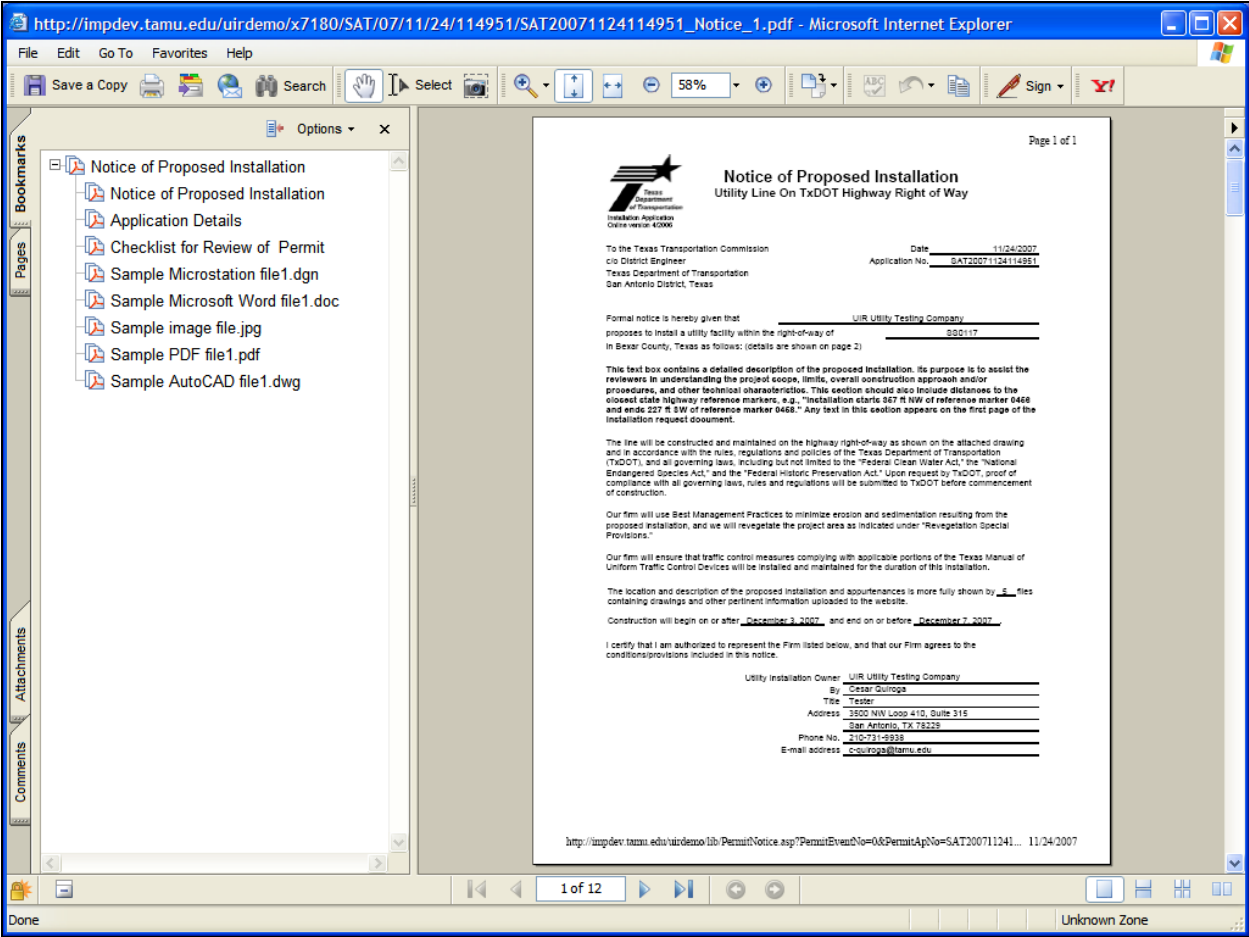

[Return Home](#)

**Requests Currently at Installation Owner (0)** [\[Hide/Show\]](#)

**Requests Currently at TxDOT (1)** [\[Hide/Show\]](#)

Installation Owner Job No.	Installation Request No.	Dist App No.	Maintenance Section	Highway	Status	Last Event
UTC 2007-01	SAT20071124114951		Bexar Metro	SS0117	Submitted	11-24-2007

- To view the new installation request, click the installation request number. When the **Basic Information** screen opens, click [View Notice \(PDF\)](#).

- UIR sends an email to officials in the utility permit office to alert them about the new proposed installation request. It also sends an acknowledgment email to the user who submitted the application.

## REVIEWING

After submitting the installation request, TxDOT officials proceed with the review of the proposed installation. The review may include routing the proposed installation request to appropriate TxDOT offices and, if needed, back to the user who submitted the application for clarification or additional/revised documentation. If TxDOT sends a request back to the applicant, UIR generates an email to alert that user. Note: Login to UIR frequently to verify the status of a proposed installation request. Email is an external process to UIR, and, therefore, there is no guarantee that UIR-generated emails will always reach the user.

### Submit a Clarification

A request for clarification from TxDOT is a request for a simple comment to help clarify or confirm information that was not evident in the documentation originally submitted. Note: The clarification interface does not enable users to upload files or otherwise modify the description and content of the proposed installation.

To submit a clarification:

- Open an installation request that shows [Submit clarification](#) under [Action Needed](#).
- Click **Conduct Action**.
- Select “Submitting clarification / Conduct review” and type the clarification comment. Note: The interface also provides the option to withdraw the application. Selecting “Withdrawing application / Nothing (application withdrawn)” changes the status of the installation request to withdrawn and moves the request to [Closed Requests](#).
- Click **Submit Action** to send the clarification to TxDOT.

### Submit Revised Documentation

A request for revised documentation enables the applicant to access the six-step interface to add, delete, and or edit data (including files) associated with the original submission. Note: A request for revised documentation is a request to revise the original submission. It is *not* a rejection of the original submission and it is *not* a request to prepare a brand new submission from scratch. In contrast, a rejection from TxDOT will be clearly labeled as “Application rejected / Nothing (application rejected).”

To submit revised documentation:

- Open an installation request that shows [Submit revised documentation](#) under [Action Needed](#).

Requests Currently at Installation Owner (1) <a href="#">[Hide/Show]</a>						
Installation Owner Job No.	Installation Request No.	Dist App No.	Maintenance Section	Highway	Action Needed	Last Event
UTC 2007-01	SAT20071124114951	TE-07-53	Bexar Metro	SS0117	Submit revised documentation	11-25-2007

If your request is approved, you will be required to notify TxDOT 48 hours (2 business days) before you start construction to allow for proper inspection and coordination of work days and traffic control plans. Use the UIR website or contact the inspector listed on the Approval Form for the 48-hour notification. DO NOT start construction until you have coordinated the construction start date and inspection with TxDOT. You are also required to keep a copy of the Approval Form, the Notice of Proposed Installation, and any approved amendments at the job site at all times.

- Review the **Basic Information** screen as needed.

Special Comments [Optional] This text box is used to provide additional relevant information, e.g., if this request is part of a large project that involves several requests (in this case, the user would list all installation request numbers: SAT20071120083012, SAT20071120100512, and so on).

Save and Continue

1-Request Checklist 2-Basic Information 3-Attach Files 4-Find Location 5-View Summary 6-Submit Request

[View Comments by TxDOT](#)

**Select and attach files**

Find File:

[\[Click here to see valid file types you can upload\]](#)

**View and verify attachments and PDF files**

Attachment	Size	PDF	Delete
Sample Microstation file1 revised.dgn	73.5KB		

Open, review, and print each PDF file to make sure it is readable and prints correctly. Keep in mind the system automatically converts CAD files (e.g., Microstation, AutoCAD) to 11x17 PDF files. If the PDF file is not readable, delete the attachment, correct the drawing, and try again.

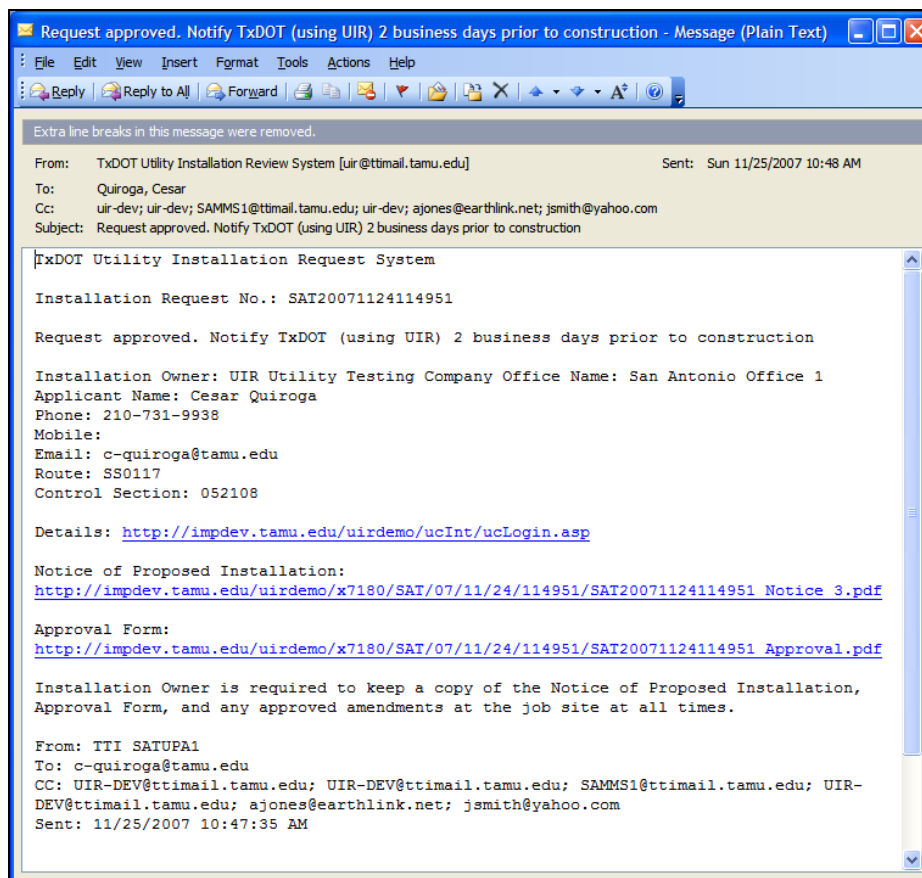

- In Step 6, click the check box and then click **Submit Application** to generate a revised version of the installation request PDF document.
- After completing the process, UIR updates the status of the proposed installation request. At this point, the applicant can open and view the request, but the **Conduct Action** button is disabled.

Requests Currently at Installation Owner (0) [Hide/Show]						
Requests Currently at TxDOT (1) [Hide/Show]						
Installation Owner Job No.	Installation Request No.	Dist App No.	Maintenance Section	Highway	Status	Last Event
UTC 2007-01	SAT20071124114951	TE-07-53	Bexar Metro	SS0117	Under review	11-25-2007

- As with the original submission, UIR sends an email to officials in the utility permit office to alert them about the new proposed installation request. It also sends an acknowledgment email to the user who submitted the application.

## APPROVAL/PRE-CONSTRUCTION

During the approval phase, a designated TxDOT official approves the proposed installation and routes the approval form along with any relevant special provisions to the installation owner user for further processing. UIR also sends an email to the applicant, the designated inspector, and any email recipient that the applicant added in Step 6. For convenience, the email includes direct links to the notice of proposed installation and approval forms.

At least 2 business days prior to starting construction, the installation owner user (or another duly authorized installation owner user) must notify TxDOT—using UIR—that construction is about to commence. During the notification process, UIR sends an email to the designated TxDOT

inspector who then coordinates with the installation owner user details such as the actual construction schedule and traffic control plans. Note: Only users with valid UIR accounts within the installation owner office can access the system to notify TxDOT online. If the user who submitted the original application is not involved in field operations, make sure to add one or more construction representatives (who are employees, not consultants or contractors) as UIR users to enable them to notify TxDOT online.

To notify the TxDOT inspector that construction is about to start:

- Open an installation request that shows **Request approved. Notify TxDOT (using UIR) 2 business days prior to construction under Action Needed.**

Requests Currently at Installation Owner (1) [Hide/Show]						
Installation Owner Job No.	Installation Request No.	Dist App No.	Maintenance Section	Highway	Action Needed	Last Event
UTC 2007-01	SAT20071124114951	TE-07-53	Bexar Metro	SS0117	Request approved. Notify TxDOT (using UIR) 2 business days prior to construction	11-25-2007

If your request is approved, you will be required to notify TxDOT 48 hours (2 business days) before you start construction to allow for proper inspection and coordination of work days and traffic control plans. Use the UIR website or contact the inspector listed on the Approval Form for the 48-hour notification. DO NOT start construction until you have coordinated the construction start date and inspection with TxDOT. You are also required to keep a copy of the Approval Form, the Notice of Proposed Installation, and any approved amendments at the job site at all times.

- Review the **Basic Information** screen as needed.

<b>Review TxDOT's request</b>					
Requested Action by TxDOT	Request approved. Notify TxDOT (using UIR) 2 business days prior to construction				
Comment from TxDOT	No work on weekends. Restore ROW to original condition.				
<b>Response to TxDOT</b>					
Response / Request	Ready to start construction / Conduct inspection <input type="button" value="v"/>				
Route to	Bexar Metro Maintenance Section (TTI SATMS1) Note: The system will also send emails to other registered officials in the same office.				
Installation Owner Comment [Optional]	Our construction crew is ready to start construction. Our traffic control plan is ready for your review and approval. Please coordinate with one of our construction coordinators (Paul Smith, 210-456-9093, or Jane Wilson, 210-456-9045).				
					<b>Submit Action</b>

- After completing the process, UIR updates the status of the proposed installation request. At this point, the applicant can open and view the request, but the **Conduct Action** button is disabled.

Requests Currently at Installation Owner (0) [Hide/Show]						
Requests Currently at TxDOT (1) [Hide/Show]						
Installation Owner Job No.	Installation Request No.	Dist App No.	Maintenance Section	Highway	Status	Last Event
UTC 2007-01	SAT20071124114951	TE-07-53	Bexar Metro	SS0117	Construction	11-25-2007

In addition to the option to notify TxDOT 2 business days prior to starting construction, the interface enables the user to withdraw the application or to submit an amendment request. Selecting “Withdrawing application / Nothing (application withdrawn)” changes the status of the installation request to withdrawn and moves the request to [Closed Requests](#). Selecting “Submitting amendment / Conduct amendment review” enables the user to submit a request to amend the originally approved proposal. See [Amendments](#) for additional information.

## CONSTRUCTION

### Overview

After the TxDOT inspector receives the 2-business day notification (via UIR), the status of the installation request in UIR becomes “Construction.” By default, during the construction phase, the TxDOT inspector has control of the installation request in UIR (i.e., the applicant can open and view the request, but the **Conduct Action** button is disabled). In general, the TxDOT inspector has the following UIR interface options:

- Ask the installation owner user to re-submit the 2-business day notification to TxDOT at a later date. This option may be necessary if, for example, TxDOT is conducting maintenance work on the ROW that might prevent the installation owner from starting its own construction activities. If the inspector chooses this option, UIR will transfer control of the installation request to the applicant (i.e., when the applicant opens the request, the **Conduct Action** button becomes enabled).
- Stop construction and ask the installation owner user to submit an amendment request. This option might be necessary if, in the opinion of the inspector, the conditions on the ground are such that an amendment to the previously approved proposal is warranted. Examples of potential conditions include the determination of the need for significant changes in horizontal alignment, vertical alignment, and/or construction schedule. If the inspector chooses this option, UIR will transfer control of the installation request to the applicant (i.e., when the applicant opens the request, the **Conduct Action** button becomes enabled).
- Notify the utility permit office that construction has ended. The TxDOT inspector chooses this option if, in the opinion of the inspector, construction has finished completely (i.e., there are no pending construction items or temporary utility adjustments, and the finished installation meets all relevant specifications, rules, and regulations, including the Utility Accommodation Rules). If the inspector chooses this option, UIR changes the status of the installation request to “Post-construction” and transfers control of the installation request to the TxDOT district utility permit office for further processing.

## Re-Submit 2-Business Day Notification

To re-submit the 2-business day notification:

- Open an installation request that shows [Request approved](#). [Notify TxDOT \(using UIR\) 2 business days prior to construction](#) under [Action Needed](#).
- Review the **Basic Information** screen as needed.
- Review the **Event History** screen as needed.
- Click **Conduct Action**.
- Select “Ready to start construction / Conduct inspection” and provide information the inspector needs to start the inspection process, including information about the traffic control plan and the name and phone number of a representative of the installation owner in the field.
- Click **Submit Action** to send the notification to TxDOT.

## Submit Amendment

Between approval and post-construction, a user can submit an amendment request as long as the user has control over the installation request (i.e., when opening an installation request, the **Conduct Action** button is enabled). An amendment is a modification to a previously approved proposal and can involve changes such as changes in construction schedule, design, and/or alignment. There are two types of amendments: user-triggered amendments and TxDOT-triggered amendments. In either case, the process involves submitting the amendment, having TxDOT review the amendment, making modifications to the amendment (as needed), receiving approval (or rejection) of the amendment, notifying the TxDOT inspector 2 business days prior to construction, and proceeding with construction. An installation request could have multiple amendments.

Submitting an amendment request is very similar to submitting revised documentation prior to the original approval (see [Submitting Revised Documentation](#)). To submit an amendment request:

- Open an installation request that, under [Action Needed](#), shows one of the following:
  - [Request approved](#). [Notify TxDOT \(using UIR\) 2 business days prior to construction](#),
  - [Stop construction](#). [Submit amendment](#),
  - [Review partially completed](#). [Submit revised amendment](#), or
  - [Amendment approved](#). [Notify TxDOT \(using UIR\) 2 business days prior to construction](#).
- Review the **Basic Information** screen as needed.
- Review the **Event History** screen as needed.
- Click **Conduct Action**.
- Select “Submitting amendment / Conduct review” (or “Submitting revised amendment / Conduct review” in the case of revised amendments). Note: The interface also provides the option to withdraw the application. Selecting “Withdrawing application / Nothing

(application withdrawn)” changes the status of the installation request to withdrawn and moves the request to [Closed Requests](#).

- Click **Continue** to display an editable copy of the previous approved submission.
- As needed, click one or more of the six step buttons to review, add, delete, or revise data. In Steps 1, 2, and 4, make sure to click **Save and Continue** to save the edits.
- In Step 6, click the check box and then click **Submit Application** to generate a PDF version of the amendment request.
- After completing the process, UIR updates the status of the proposed installation request. At this point, the applicant can open and view the request, but the **Conduct Action** button is disabled.
- As with the original submission, UIR sends an email to officials in the utility permit office to alert them about the new amendment request. It also sends an acknowledgment email to the user who submitted the application.

As with the original submission, TxDOT reviews the amendment request. The review may include routing the amendment request to appropriate TxDOT offices and, if needed, back to the user who submitted the amendment request for clarification or additional/revised documentation. If TxDOT sends a request back to the applicant, UIR generates an email to alert that user.

If TxDOT approves the amendment request, a designated TxDOT official routes the approval form along with any relevant special provisions to the installation owner user for further processing. UIR also sends an email to the applicant and any email recipient that the applicant added in Step 6.

## POST-CONSTRUCTION

After the TxDOT field inspector notifies the district utility permit office that construction has ended, this office requests the installation owner to submit an as-built certification online.

To submit the as-built certification:

- Open an installation request that shows [Construction completed](#). [Submit as-built certification](#) under [Action Needed](#).

Requests Currently at Installation Owner (1) [Hide/Show]						
Installation Owner Job No.	Installation Request No.	Dist App No.	Maintenance Section	Highway	Action Needed	Last Event
UTC 2007-01	SAT20071124114951	TE-07-53	Bexar Metro	SS0117	Construction completed. Submit as-built certification	11-25-2007

If your request is approved, you will be required to notify TxDOT 48 hours (2 business days) before you start construction to allow for proper inspection and coordination of work days and traffic control plans. Use the UIR website or contact the inspector listed on the Approval Form for the 48-hour notification. DO NOT start construction until you have coordinated the construction start date and inspection with TxDOT. You are also required to keep a copy of the Approval Form, the Notice of Proposed Installation, and any approved amendments at the job site at all times.

- Review the **Basic Information** screen as needed.
- Review the **Event History** screen as needed.

- Click **Conduct Action**.
- Select “Submitting as-built certification / Conduct as-built review” and provide information the utility permit office needs to validate the as-built documentation.
- Click **Submit Action** to send the as-built certification to TxDOT.

SAT20071124114951		Basic Information	Event History	<b>Conduct Action</b>	Go back
<b>Review TxDOT's request</b>					
Requested Action by TxDOT	Construction completed. Submit as-built certification				
Comment from TxDOT	When submitting the as-built certification, notice the inspector's comments (see last event).				
<b>Response to TxDOT</b>					
Response / Request	Submitting as-built certification / Conduct as-built review				
Route to	Utility Permit Office (TTI SATUPO1) Note: The system will also send emails to other registered officials in the same office.				
Installation Owner Comment [Optional]	In this example, the user is certifying that the as-built facility matches the approved documentation and, therefore, as-built plans are not necessary. If there had been changes on the ground compared to the approved alignment, the user would need to select the second option and attach as-built files.				
<b>Provide As-Built Condition Certification</b>					
In accordance with the Utility Accommodation Rules (Texas Administrative Code, Title 43, Part 1, Chapter 21, Subchapter C, Rule §21.37(c)(5)), we certify that:					
<input checked="" type="radio"/> We constructed this utility installation according to the description, construction plans, special provisions, and other related documents, as described in the Notice of Proposed Installation, Approval Form, and approved amendments. We also maintained field representation during installation of this utility.					
<input type="radio"/> We constructed this utility installation according to as-built plans (attached below) that include the installed location, vertical elevations, and horizontal alignments of the utility facility based upon the department's survey datum, the relationship to existing highway facilities and the right of way line, and access procedures for maintenance of the utility facility. We also maintained field representation during installation of this utility.					
<b>Select and Attach Files</b>					
Find File:	<input type="text"/>				Browse...

**PART B. TXDOT USER MANUAL**

## ACCESSING UIR

### CLIENT SYSTEM REQUIREMENTS

To use UIR, use a desktop or laptop computer with at least the following specifications:

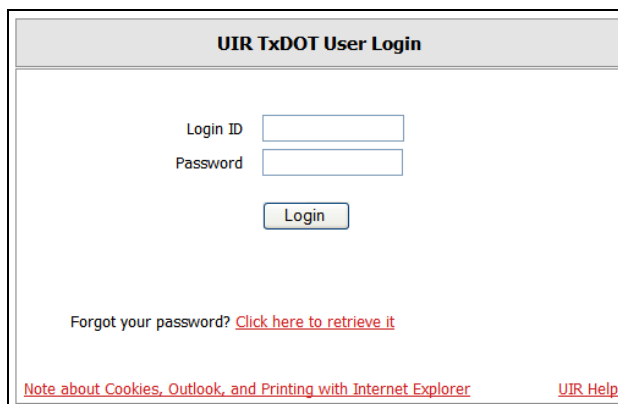

- Windows® XP with Service Pack 2 (SP2),
- 256 MB of RAM,
- Microsoft® Internet Explorer® (IE) 6.0 with SP2,
- PDF reader such as Adobe® Acrobat® Reader® 6.0, and
- Internet connection.

There is no need to install any special client-side software to run UIR. However, you will need a valid, active UIR account to access the system and an email address to receive automated alert emails from the system.

UIR runs on Internet Explorer web browsers (at least version 6 SP2). UIR does not run properly on non-IE browsers (such as Mozilla® Firefox®).

### LOGIN TO UIR

At the UIR TxDOT User Login page, enter your UIR login ID and password and click **Login**.

UIR TxDOT User Login

Login ID

Password

Login

Forgot your password? [Click here to retrieve it](#)

[Note about Cookies, Outlook, and Printing with Internet Explorer](#) [UIR Help](#)

### PASSWORD AND LOGIN ID RETRIEVAL

If you forgot your password, there are three options to retrieve it:

- At the UIR TxDOT User Login page, click [Click here to retrieve it](#). Then provide your login ID and click **Email My Password**. Internally, UIR resets your password to a temporary password.
- Contact your district (or division) security administrator and request a temporary password. The security administrator can generate a new temporary password (system

generated or typed) by editing your account under **Manage <Unit> Accounts**, where <Unit> represents the TxDOT unit three-letter code (e.g., SAT, PHR, MNT, and ROW).

In all cases, UIR will send the new temporary password to the email address associated with the login ID. The next time you login, UIR will ask you change that temporary password to a more permanent password.

If you forgot your login ID, contact your district (or division) security administrator. The security administrator can look up your login ID under **Manage <Unit> Accounts**.

## **COOKIES, OUTLOOK, AND PRINTING WITH INTERNET EXPLORER**

UIR uses session objects as a way to "link" all the pages opened by the user within the same session. The server automatically generates a session object in response to a user request to start a session. Before you can log in, make sure your browser is set to enable per-session cookies. After you close the browser or when the session expires (after 60 minutes of inactivity), the server will automatically delete the session object. To enable per-session cookies in Internet Explorer, go to **Tools > Internet Options > Privacy** and move the slider to **Medium**.

If you use Microsoft Outlook, disable the option to remove extra line breaks to prevent different lines from displaying in the same row. You can do this in Outlook by going to **Tools > Options > Preferences > Email Options**.

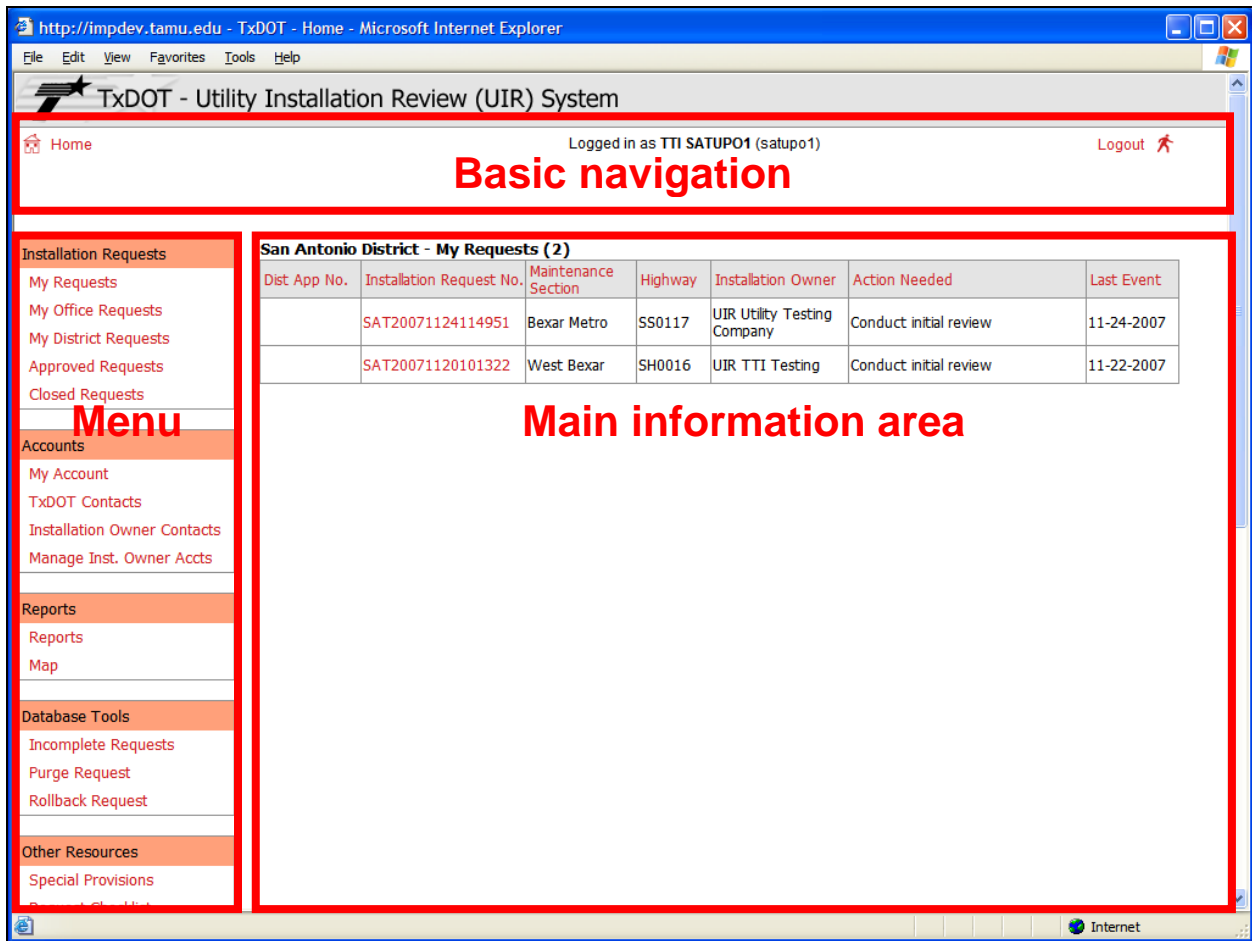

If you use Microsoft Internet Explorer, make sure the browser is set to print background colors and images. In Internet Explorer, go to **Tools > Internet Options > Advanced** and, under "Printing," check the "Print background colors and images" option.

# NAVIGATING UIR

## SCREEN STRUCTURE AND MENU OPTIONS

Most UIR screens use the following structure:

- *Basic navigation.* This area, at the top of the user interface, includes **Home** (i.e., the user’s “home” page, which lists the active requests associated with the user), the user’s name and login ID, and **Logout**.
- *Menu.* This area includes the menu options available to the user, which may vary depending on the user’s account privilege level.
- *Main information area.* The content displayed depends on the menu option the user selects.

The menu options available to individual TxDOT users depends on the specific role that user plays on the installation review process and user account privilege level. The following is a description of the various menu options and their functions.

- Installation Requests:
  - **My Requests** displays the user's active requests (same as **Home**).
  - **My Office Requests** shows a list of active requests associated with all TxDOT users in the same office.
  - **My District Requests** shows a list of active requests submitted to the same TxDOT district office, grouped by maintenance section.
  - **Approved Requests** shows a list of active requests that have an approval status, grouped by maintenance section.
  - **Closed Requests** shows closed requests, grouped by maintenance section.
- Accounts:
  - **My Account** displays user profile information.
  - **TxDOT Contacts** shows a list of TxDOT officials who may be involved in the installation review process.
  - **Installation Owner Contacts** shows a list of installation owners, offices, and registered UIR users.
  - **Manage Installation Owner Accounts** enables a district user with administrative privileges to manage installation owner user accounts.
  - **Manage <Unit> Accounts** enables a TxDOT unit (e.g., a district or a division) security administrator to manage TxDOT user accounts within that unit.
  - **Manage <Unit> Offices** enables a TxDOT unit (e.g., a district or a division) security administrator to manage TxDOT offices within that unit.
  - **Manage TxDOT Units** enables an ISD security administrator to manage TxDOT units (e.g., a district or a division) and to create and manage security administrator accounts for each unit.
- Reports
  - **Reports** enables the user to generate reports using a general-purpose query engine.
  - **Map** displays an interactive map of the state and includes installation request display and query capabilities.
- Database Tools:
  - **Incomplete Requests** shows a list of incomplete new requests and incomplete new responses to TxDOT.
  - **Purge Request** enables the TxDOT user to purge installation requests from the UIR database.
  - **Rollback Request** enables the TxDOT user to rollback the last transaction associated with an installation request.
- Other Resources
  - **Special Provisions** displays special provisions that TxDOT attaches to installation request approval forms.
  - **Request Checklist** displays questions that installation owner users must answer when they submit installation requests.
  - **Feedback** enables users to provide comments and suggestions on how to improve UIR.
  - **UIR Help** opens a new browser window that shows the interactive UIR online help system.
  - **TxDOT Manuals** opens a new browser window that lists TxDOT manuals that are available online

- [Utility Accommodation Rules](#) opens a new browser window that lists the Utility Accommodation Rules in Texas.
- [TxDOT Standard Specifications](#) opens a new browser window that enables users to search standard construction specifications at TxDOT.
- [Texas Manual on Uniform Traffic Control Devices](#) opens a new browser window that points to the online version of the Texas Manual on Uniform Traffic Control Devices.
- [TxDOT Traffic Engineering Standard Plan Sheets](#) opens a new browser window that points to standard traffic control plan sheets at TxDOT.
- [Utility Listings](#) opens a new browser window that lists utility regulatory agencies in Texas along with listings of registered utility owners and operators.
- [ROW Maps](#) opens a new browser window that points to the ROW Maps application at TxDOT.
- [Survey Control Points](#) opens a new browser window that points to the Survey Control Point application at TxDOT.

## INSTALLATION REQUESTS

### My Requests

[My Requests](#) displays the user’s active requests (same as [Home](#)).

- Click [My Requests](#) in the Installation Requests menu box.
- To view a specific installation request, click the corresponding installation request number.
- Clicking any column header sorts the selected table alphabetically according to that column (first in ascending order and then in descending order).

San Antonio District - My Requests (2)						
Dist App No.	Installation Request No.	Maintenance Section	Highway	Installation Owner	Action Needed	Last Event
	<a href="#">SAT20071124114951</a>	Bexar Metro	SS0117	UIR Utility Testing Company	Conduct initial review	11-24-2007
	<a href="#">SAT20071120101322</a>	West Bexar	SH0016	UIR TTI Testing	Conduct initial review	11-22-2007

### My Office Requests

[My Office Requests](#) shows a list of active requests associated with all TxDOT users in the same office.

- Click [My Office Requests](#) in the Installation Requests menu box.
- To view a specific installation request, click the corresponding installation request number.
- Clicking any column header sorts the selected table alphabetically according to that column (first in ascending order and then in descending order).

San Antonio District - My Office Requests (2)

	SAT20071120101322	West Bexar	SH0016	UIR TTI Testing	Conduct initial review	11-22-2007

## My District Requests

**My District Requests** shows a list of active requests submitted to the same TxDOT district, grouped by maintenance section.

- Click **My District Requests** in the Installation Requests menu box. This view shows two types of requests:
  - *Requests Currently at TxDOT*. This list includes requests for which there is a pending action by TxDOT.
  - *Requests Currently at Installation Owner*. This list includes requests for which there is a pending action by the installation owner user.
- Clicking any column header sorts the selected table alphabetically according to that column (first in ascending order and then in descending order).
- To view a list of installation requests associated with a specific maintenance section (or all maintenance sections) and current location, click the corresponding number in the table.
- To view a specific installation request, click the corresponding installation request number.

San Antonio District - My District Requests

## Approved Requests

**Approved Requests** shows a list of active requests that have an approval status, grouped by maintenance section.

- Click **Approved Requests** in the Installation Requests menu box. This view shows two types of requests:

- *Requests Currently at TxDOT.* This list includes requests for which the installation owner has acknowledged receipt of the approval and has notified TxDOT that a field crew will notify the TxDOT inspector before construction. Note: A recent modification to the UIR interface now prevents installation owners from choosing this option (the only option available to installation owners now is to use UIR to notify the inspector). Over time, the number of installation requests in the requests currently at TxDOT column should go down to zero.
- *Requests Currently at Installation Owner.* This list includes requests for which installation owner users need to notify TxDOT (using UIR) when they will start construction.
- Clicking any column header sorts the selected table alphabetically according to that column (first in ascending order and then in descending order).
- To view a list of installation requests associated with a specific maintenance section (or all maintenance sections) and current location, click the corresponding number in the table.
- To view a specific installation request, click the corresponding installation request number. Note: The interface enables certain TxDOT district users (e.g., utility permit office users and inspectors) to open approved requests and “take control” of those requests, which may be useful in situations where the installation owner user did not notify TxDOT before construction. Taking control of a request moves a request from the installation owner user to the designated TxDOT inspector. To take control of an approved request, see [Take Control of Approved Request](#).
- To search for an installation request:
  - Select an option under Search by, type the corresponding search value in the text box, and click **Go**. Note: The search tool accepts partial entries, which enables the retrieval of any installation request for which the selected criterion contains the string in the text box anywhere in the database table field.

## Closed Requests

**Closed Requests** shows closed requests, grouped by maintenance section.

- Click **Closed Requests** in the Installation Requests menu box. This view shows two types of requests:
  - *Requests Currently at TxDOT.* This list includes the closed requests.
  - *Requests Currently at Installation Owner.* This list only includes zeros.
- Clicking any column header sorts the selected table alphabetically according to that column (first in ascending order and then in descending order).
- To view a list of installation requests associated with a specific maintenance section (or all maintenance sections) and current location, click the corresponding number in the table.
- To view a specific installation request, click the corresponding installation request number. Note: The interface enables certain TxDOT district users with an administrative privilege to open closed installation requests to rollback the last transaction (i.e., the

transaction that sends the request to the closed permit box). Rolling back that transaction changes the status of a request from closed to active.

- To search for an installation request:
  - Select an option under Search by, type the corresponding search value in the text box, and click **Go**. Note: The search tool accepts partial entries, which enables the retrieval of any installation request for which the selected criterion contains the string in the text box anywhere in the database table field.

## ACCOUNTS

### Account Status

The account status determines whether a user can login to UIR and can be one of the following: Active, Inactive, Out of Office, and Permanently Inactive.

- *Active*. An active user can login to UIR.
- *Inactive*. An inactive user cannot login to UIR (intended to be on a short-term basis).
- *Out of Office*. An out-of-office user is inaccessible (i.e., UIR cannot route requests to that user). The user can login at any time and change the status.
- *Permanently Inactive*. A permanently inactive user cannot login to UIR (intended to be on a long-term basis).

### Account Privilege Level

The account privilege level determines the level of access an active user has, according to the user's office type and normal role or function in UIR (see next section). The privilege level can be one of the following: User, Administrator, and Guest.

- *User*. A user with a user privilege level can fulfill basic UIR functions according to the specific office type.
- *Administrator*. A user with an administrator privilege level can fulfill additional UIR functions according to the specific office type. At the district level, it is normally sufficient to assign an administrator privilege to users in the following office types: utility permit office, utility permit approval, and security administrator.

- *Guest*. A user with a guest privilege level has read-only access to UIR, regardless of office type.

### Account Roles or Functions

TxDOT users have specific functions in UIR depending on the office type to which they belong. The table below summarizes the functions for users with a *user* privilege level.

Function/Role	Office Type								
	Information Systems Division Security Administrator	Other Division or District Security Administrator	District Utility Permit Office	District Utility Permit Approval	District Area Office or Maintenance Section	District Utility Coordinator or Superintendent	Other District Offices	Maintenance Division Review or Approval	Right of Way Division Oversight
View request	X	X	X	X	X	X	X	X	X
Review request			X		X	X	X	X	
Approve request				X					
Receive 2-business day notification					X				
Stop construction					X

## TxDOT Contacts

- Click **TxDOT Contacts** in the Accounts menu box to view the list of TxDOT officials from the same district who may be involved in the installation review process. The **TxDOT Contacts** table is a read-only table.
- Select a different TxDOT district (drop down list) to view the names of TxDOT officials who may be involved in the installation review process in that district.
- Click a name in the list to display that official's contact information.
- Clicking any column header sorts the table alphabetically according to that column (first in ascending order and then in descending order).

## Manage Installation Owner Accounts

Managing installation owner accounts includes reviewing and approving requests for new installation owner office accounts and managing existing accounts.

### Reviewing and Approving New Installation Owner Office Accounts

- Click **New Installation Owner offices/users ...** in your **Home** view.

New Installation Owner offices/users waiting to be approved (1). Click here to review.						
San Antonio District - My Requests (1)						
Dist App No.	Installation Request No.	Maintenance Section	Highway	Installation Owner	Action Needed	Last Event
	SAT20071120101322	West Bexar	SH0016	UIR TTI Testing	Conduct initial review	11-22-2007

- Alternatively, click **Manage Installation Owner Accounts** in the Accounts menu box.

Approve/Reject New Installation Owner User Account		
Installation Owner Name	Office Name	Application Date
UIR Utility Testing Company	San Antonio Office 1	11/24/2007 10:58:24 AM

San Antonio District - Existing Installation Owner Offices		
Installation Owner Name	Office Name	Status
AT&T-Texas	Construction (Const)	Active
AT&T-Texas	Construction Commerce	Active
AT&T-Texas	Construction Montrose	Active
AT&T-Texas	Engineering North	Active

- Click the new office/user that needs approval and review the information provided.

Approve/Reject New Installation Owner User Account		
Installation Owner Name	Office Name	Application Date
UIR Utility Testing Company	San Antonio Office 1	11/24/2007 10:58:24 AM
Applicant Name	Cesar Quiroga	
Address	3500 NW Loop 410, Suite 315 San Antonio, TX 78229	
District	San Antonio	
Phone Number	210-731-9938	
Mobile Number [Optional]		
Fax Number [Optional]	210-731-8904	
Email Address	c-quiroga@tamu.edu	
Verify the integrity and completeness of the information submitted before approving the new account.		
<input checked="" type="checkbox"/> Information user provided is correct. <input checked="" type="checkbox"/> Installation owner (i.e., the utility company) is genuine and exists (Hint: check <a href="#">Utility Listings</a> ). <input checked="" type="checkbox"/> Installation owner name (i.e., the utility company name) is correct. <input checked="" type="checkbox"/> Office name is NOT the same as the installation owner name. <input checked="" type="checkbox"/> User entered installation owner and office names in the correct fields. <input checked="" type="checkbox"/> Email address is consistent with the installation owner name (in case of doubt, call the applicant to verify this information).		
<div style="display: flex; justify-content: space-around;"> <span>Approve new account</span> <span>Close</span> <span>Reject new account</span> </div>		

- Click **Approve new account** to add the new office/user to the list of active installation owner office users or, otherwise, click **Reject new account**. The system will email the applicant your decision. Note: By default, the first user associated with the new office is the designated administrator for that office. That administrator becomes responsible for adding and managing users and other administrators in the same office.

## TxDOT User Management

Security administrators manage UIR TxDOT accounts. There are two types of security administrators:

- *ISD security administrators.* An ISD security administrator activates TxDOT units (e.g., districts) and creates and manages security administrator accounts for each TxDOT unit.
- *Other TxDOT unit security administrators.* A security administrator at a TxDOT unit other than ISD (e.g., ROW Division, Maintenance Division, districts) creates offices within each unit and creates and manages TxDOT users within each office. The number of office types available depends on the specific unit and the role this unit plays on the installation review process. For example, the Maintenance Division currently has two

office types: Maintenance Division Review and Maintenance Division Approval. In contrast, a regular district has 14 office types.

## Manage <Unit> Accounts

**Manage <Unit> Accounts** enables a TxDOT unit (e.g., ROW, MNT, SAT, and PHR) security administrator to manage TxDOT user accounts within that unit.

- Click **Manage <Unit> Accounts** in the Accounts menu.
- To add a new user account:
  - Click **[Show/Hide]** next to Create New <Unit> User Account to show the new user registration form.

- Provide the information required, including a login ID and a password choice.  
Note: In order to add a user to an office, it is necessary to have an office record in the database. See [Manage <Unit> Offices](#) for additional information.
- Click **Submit** to create the new account. The system displays the new account in the list of existing TxDOT users and emails the login ID and password data to the user. The first time the user logs in, the system will ask that user to change the password.

Create New SAT User Account <span style="float: right;">[Show/Hide]</span>

## Manage <Unit> Offices

**Manage <Unit> Offices** enables a TxDOT unit (e.g., a district or a division) security administrator to manage TxDOT offices within that unit.

- Click **Manage <Unit> Offices** in the Accounts menu.
- To add a new office:
  - Click **[Show/Hide]** next to Create New <Unit> Office to show the new office registration form.
  - Provide the information required and click **Submit**.

Create New SAT Office <a href="#">[Show/Hide]</a>			
Provide office information			
Office Type	Utility Permit Office		
Office Name	Utility Permit Office		
Office Phone Number	210 - 615 - 5865		
Office Fax Number [Optional]			
Address	Street	P.O. Box 29928	
	City	San Antonio	Texas 78229
Reset Form		Close	
		Submit	

- To manage existing user accounts:
  - Under **Manage <Unit> Offices**, click the name of the office.
  - Click **Edit Office Information** and change information as needed.

- Click **Submit** to save the edits or **Cancel Edits** to cancel the changes.

Edit Office Information	
Provide office information	
Office Type	Utility Permit Office
Office Name	Utility Permit Office
Office Phone Number	210 - 615 - 5865
Office Fax Number [Optional]	- -

	City San Antonio Texas 78229
Delete Office	<input type="checkbox"/>
<div style="text-align: center;"> <input type="button" value="Cancel Edits"/> <span style="margin-left: 200px;"><input type="button" value="Submit"/></span> </div>	

## Manage TxDOT Units

**Manage TxDOT Units** enables an ISD security administrator to manage TxDOT units (e.g., a district or a division) and to create and manage security administrator accounts for each unit.

- Click **Manage TxDOT Units** in the Accounts menu.
- To activate a new TxDOT unit:
  - Click **[Show/Hide]** next to Activate New TxDOT Unit to show the new unit activation form.
  - Provide the information required, including a login ID and a password choice for the new security administrator account.
  - Click **Submit** to create the new account. The system displays the new account in the list of existing TxDOT units and emails the login ID and password data to the new security administrator. The first time that security administrator logs in, the system will ask that user to change the password.

## REPORTS

### Reports

The current version of UIR supports three types of reports:

- *Installation Request Listing*. This report provides a list of requests and basic related attribute data.
- *Performance Measures*. This report provides a summary of installation request performance data (essentially, number of days that an installation request spends between major milestones).
- *Totals*. This report provides a summary of the number of installation requests according to criteria such as installation owner, applicant name, route, and control section.

To generate a report:

- Select **Reports** from the Reports menu.
- Select the TxDOT district.
- Select whether to retrieve “All Installation Requests” or one specific installation request.
- Select additional query parameters (which apply if the user selected “All Installation Requests”).

Reports	
Select TxDOT District	
District	San Antonio District
Select Installation Request	
Installation Request No.	--- All Installation Requests ---
Applicant Name	--- All Applicant Names ---
Installation Owner	UIR Utility Testing Company
Installation Class	--- All Installation Classes ---
Route	--- All Route Numbers ---
Control Section	--- All Control Sections ---
Area Office	--- All Area Offices ---
Maintenance Section	--- All Maintenance Sections ---
County	--- All Counties ---
Request Status	Closed Requests
Currently At	--- All Office Types ---
NOPI Submitted	Date
From:	November 20 2007
To:	November 25 2007

- Select the report type (Installation Request Listing, Performance Measures, or Totals).
- Select the fields to display in the report.
- Click **Generate Report**. A new browser window displays the results. Note: The number of seconds it takes to display the query results depends primarily on the type of report and query parameters. In general, the fastest report to display is Totals. The slowest report to generate is Performance Measures.
- If needed, click **Export to .csv** to display the report results in comma-delimited format. By default, UIR opens a separate browser window to display the results in Excel.

## Map

The map enables users to display the location of installation requests on an interactive map. The map includes the following tools to navigate and retrieve information:

Tool	Name	Description
	Location	The <b>Location</b> tool enables users to place the location of a proposed installation request on the map. This tool is only accessible to installation owner users while submitting requests (Step 4).
	Overview	The <b>Overview</b> tool displays a clickable thumbnail view of the state. Clicking the tool again turns the thumbnail view off.
	Table of Contents	The Table of Contents ( <b>TOC</b> ) tool displays the list of layers that make up the map. Clicking the tool again turns the TOC off. The TOC includes three columns: <ul style="list-style-type: none"> <li>• Visible. This column shows which layers are visible at the current zoom level.</li> <li>• Active. This column shows whether a layer is active (for use with the Identify tool).</li> <li>• Name. This column shows the layer name.</li> </ul>
	Zoom In	The <b>Zoom In</b> tool enables users to zoom into the map. This tool is the default tool when users load a map. To zoom in: <ul style="list-style-type: none"> <li>• Click anywhere on the map.</li> <li>• Click and drag over an area (i.e., draw a box).</li> </ul>
	Zoom Out	The <b>Zoom Out</b> tool enables users to zoom out. To zoom out: <ul style="list-style-type: none"> <li>• Click anywhere on the map.</li> <li>• Click and drag over an area (i.e., draw a box).</li> </ul>
	Zoom Full	The <b>Zoom Full</b> tool zooms out to display the full extent of the map (by default the state of Texas).
	Zoom to Active	The <b>Zoom to Active</b> tool zooms out to display the extent of the active layer.
	Pan	The <b>Pan</b> tool enables users to move the map in a direction. To pan, click and hold down the left mouse button and drag the cursor in the desired direction. Note: The four map arrows (north, east, south, and west) also enable the map to move. For example, to move the map to the east, click the eastbound arrow.
	Identify	The <b>Identify</b> tool enables users to query active layers. To query a layer: <ul style="list-style-type: none"> <li>• Select an active layer (see Table of Contents above).</li> <li>• Click the <b>Identify</b> tool.</li> <li>• Click a feature of interest that belongs to the active layer. The system opens a table that displays attribute data associated with that specific feature.</li> </ul>
	Measure	The Measure tool enables users to measure distances on the map. To measure distances: <ul style="list-style-type: none"> <li>• Click the <b>Measure</b> tool. A box appears on the lower right corner of the map.</li> <li>• As needed, change the measurement units.</li> <li>• On the map, click the beginning point. A blue dot appears on the screen. Note: Do not drag the cursor.</li> <li>• After the blue dot appears on the screen, move the mouse to the end location and click again. A blue line connecting the two blue dots appears on the map. The distance between the two points appears in the measure box.</li> <li>• As needed, continue clicking other locations on the map to generate a chain. To measure distances along curves, use short chain legs. Note: The distance in the measure box corresponds to the cumulative chain length.</li> <li>• Click <b>Reset</b> to reset the measure tool.</li> </ul>
	Print	The <b>Print</b> tool enables users to send the current map view to a printer.
	UIR Search	The <b>UIR Search</b> tool enables users to select installation requests according to pre-specified query criteria and place the corresponding installation request locations on the map. Using the <b>Identify</b> tool in conjunction with the <b>UIR Search</b> tool enables users to query individual installation request locations and gather relevant data and documentation. For more information on how to specify query criteria parameters, see <a href="#">Reports</a> .
n/a	Right Click	Clicking the map with the right mouse button displays a menu of options that include copying, saving, printing, and emailing the map image. In the current version of UIR, the map image is in portable network graphic (PNG) format.

To run a UIR search:

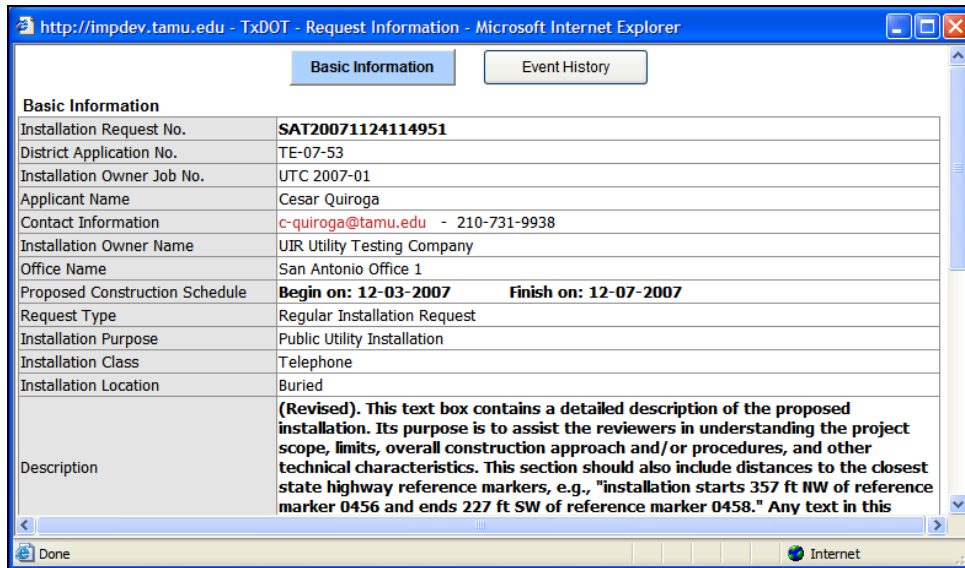

- Click the **UIR Search** tool.
- Select the TxDOT district.
- Select whether to retrieve “All Installation Requests” or one specific installation request.
- Select additional query parameters (which apply if the user selected “All Installation Requests”).
- Click **Submit Query**. If the results of the query are positive (i.e., the query retrieves installation requests), the map shows the corresponding locations on the screen. Note: It may be necessary to zoom out or pan the map to find the locations where the map shows the installation request locations.

- To query each installation request location:
  - Using the TOC tool, make sure UIR Search is the active layer. Note: The rectangular icon next to the UIR Search layer name is clickable and enables users to select the label to be associated with individual locations on the map (request number, district application number, installation owner job number, and none).

- Using the Identify tool, click any installation request location. A separate window opens, which displays basic information (including links to relevant documents) and the event history associated with that installation request.

## DATABASE TOOLS

### Incomplete Requests

**Incomplete Requests** shows a list of incomplete new requests and incomplete new responses to TxDOT. Although TxDOT users cannot view the content of any incomplete requests or incomplete new responses, it is necessary to manage those requests to prevent an unnecessary build up of incomplete requests on the UIR server (which, overtime, could result in reductions in

system performance). The current version of UIR enables TxDOT users with an administrator privilege level to delete incomplete transactions after the transactions have been on the UIR server for at least two weeks.

- Click **Incomplete Requests** in the Database Tools menu.
- To delete an incomplete transaction that is at least two weeks old, click **X** next to the request. Note: By default, incomplete transactions that are less than two weeks old cannot be deleted.
  - For new incomplete requests, clicking **X** permanently deletes this incomplete request from the database.
  - For new incomplete responses to TxDOT, clicking **X** permanently deletes the incomplete response from the database, *not* the overall request (which remains in the database).
- Clicking any column header sorts the selected table alphabetically according to that column (first in ascending order and then in descending order).

San Antonio District - New Incomplete Requests (2) [Hide/Show]					
Installation Request No.	Installation Owner Name	Office Name	Applicant Name	Event Time	Delete
SAT20071120152436	UIR Demonstration	UIR Demonstration Office 1	Uir Demonstrator4	11/20/2007 3:24:36 PM	
SAT20071124090252	UIR TTI Testing	San Antonio Office 1	TTI SAT1	11/24/2007 9:02:52 AM	

Clicking "X" permanently deletes an incomplete request from the database. This operation is irreversible.

San Antonio District - Incomplete Responses to TxDOT (0) [Hide/Show]					
--	--	--	--	--	--

## Purge Request

**Purge Request** enables TxDOT users with an administrator privilege to purge installation requests from the UIR database. Warning: Purging an installation request from UIR deletes database records and attachment files irreversibly. The purge operation should only be executed by users who have ample experience with the system and fully understand (1) the long-term value of maintaining an inventory of utility installations on the ROW and (2) the implications of deleting records that document actual transactions between TxDOT and installation owners. Normally, the only valid reason to purge a request from the UIR database is to clean the database from invalid and/or test requests.

- Click **Purge Request** in the Database Tools menu.
- Search for the installation request to delete, either by clicking on one of the numbers in the table or by using the search tool.
- Click the installation request number.
- Review the **Basic Information** and, as needed, the **Event History**.
- Click **Purge this Request**.
- Confirm whether to purge the request. To reduce the risk of accidental deletions, the system asks for a confirmation twice.

San Antonio District - Purge Requests

## Rollback Request

**Rollback Request** enables TxDOT users with an administrator privilege to rollback the last transaction associated with an installation request. Rolling back a transaction may be necessary if the last transaction was executed in error and it is not possible to recover by requesting the recipient to route the request back to the original sender. **Warning:** Rolling back a transaction deletes all the database records and attachment files associated with that transaction irreversibly. The rollback request operation should only be executed by users who have ample experience with the system and fully understand (1) the long-term value of maintaining an inventory of utility installations on the ROW and (2) the implications of deleting records that document actual transactions between TxDOT and installation owners.

- Click **Rollback Request** in the Database Tools menu.
- Search for the installation request to roll back, either by clicking on one of the numbers in the table or by using the search tool.

San Antonio District - Rollback Requests

**Select and Attach Files**

Find File:

[Click here to see valid file types you can upload]

- To add new special provisions:
  - Click **Browse...** and navigate the folder structure until finding the file of interest.
  - Click **Upload File**. The system uploads the file and generates a PDF version of that file.
  - Open the PDF file to verify it is readable and prints correctly.
  - As needed, upload additional special provision files. The system can accept up to five files.
  - When finished uploading files, click **Add Special provision(s) to List**. By default, all added special provisions are active. Notice the date stamp and the name of the user who uploaded the files.
- To edit existing special provisions:
  - As needed, change the special provision title. Note: It is only possible to change the title of special provisions that have not been associated with an installation request.
  - To inactivate a special provision, change the status to Inactive. Note: Inactive special provisions remain in the database, but are not visible to regular users.
  - When finished editing, click **Update Database**.
  - To delete a special provision from the database, click **X**. Note: It is only possible to delete special provisions that have not been associated with an installation request.

## Request Checklist

- Click **Request Checklist** to display a list of checklist questions that routinely apply at the TxDOT district. Note: Clicking **Show All Questions** displays all questions at the district, both active and inactive.
- As needed, select a different district to view the list of checklist questions that pertain to that district.

Request checklist in <span style="border: 1px solid black; padding: 2px;">San Antonio District</span>					
ID	Order	Question	From	To	Status
1	1	Is the location and identification (highway number) of the TxDOT highway clearly indicated on the plans?	09-13-2005		Active
2	2	Are the utility plans legible, drawn to scale, and accurately dimensioned?	09-13-2005		Active
3	3	Is the location of the proposed utility line clearly shown on the plans?	09-13-2005		Active
4	4	Are other existing utility lines in the vicinity shown on the plans?	09-13-2005		Active
5	5	Are the right of way line and edge of highway pavement clearly shown on plans?	09-13-2005		Active
6	6	For lines to be installed parallel to the highway, is the distance from the right of way line and from the edge of highway pavement clearly shown?	09-13-2005		Active
7	7	For installations parallel to the highway, does the installation alignment change? Alignment changes need to be justified and reasonable.	09-13-2005		Active
10	8	Are appropriate temporary erosion control devices (e.g., rock berms, silt fences) shown where the line will be across/along a creek, drainage way, steep slope, within the Edwards Aquifer Recharge Zone, or in other critical areas?	09-13-2005		Active
11	9	For aerial installations, do the plans clearly show and differentiate between existing poles and new poles?	09-13-2005		Active
8	10	For highway crossings, is the location of the crossing clearly shown on the plans? The crossing should be as close to 90 degrees as practical.	09-13-2005		Active
9	11	For lines crossing the highway, crossing intersecting streets/county roads, or passing through the protected root area of desirable trees, is it clearly shown that the line will be installed by boring? In addition, casing should be shown under highways and paved city street/county road intersections.	09-13-2005		Active

Cancel Edit      Update Checklist

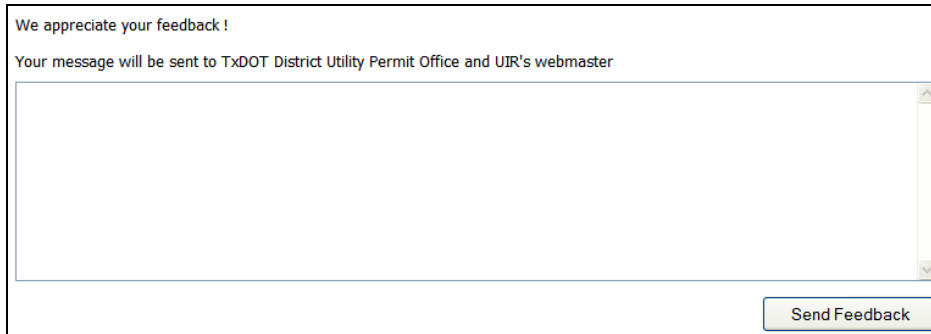

Add New Checklist Question

Add Question to List

- To add a new question, type the question in the text box and then click **Add Question to List**. By default, all added questions are active.
- To edit existing checklist questions:
  - As needed, change the question text. Note: It is only possible to change the text of questions that have not been associated with an installation request.
  - To inactivate a question, change the status to Inactive. Note: Inactive special provisions remain in the database, but are not visible to regular users.
  - As needed, change the order in which the interface presents questions to users. By default, assigning a number to a question moves the question to that position and shifts all other questions up or down depending on the number chosen. For example, assigning the number 1 to a question that was in position 4 moves that question to position 1 and shifts the original questions 1, 2, and 3 to positions 2, 3, and 4, respectively.
  - When finished editing, click **Update Checklist**.
  - To delete a question from the database, click ✗. Note: It is only possible to delete questions that have not been associated with an installation request.

## Feedback

- Click **Feedback** to display a text form to provide feedback and suggestions on how to improve UIR.
- Enter the text and click **Send Feedback** to send the feedback to the “home” TxDOT district utility permit office and the UIR webmaster.

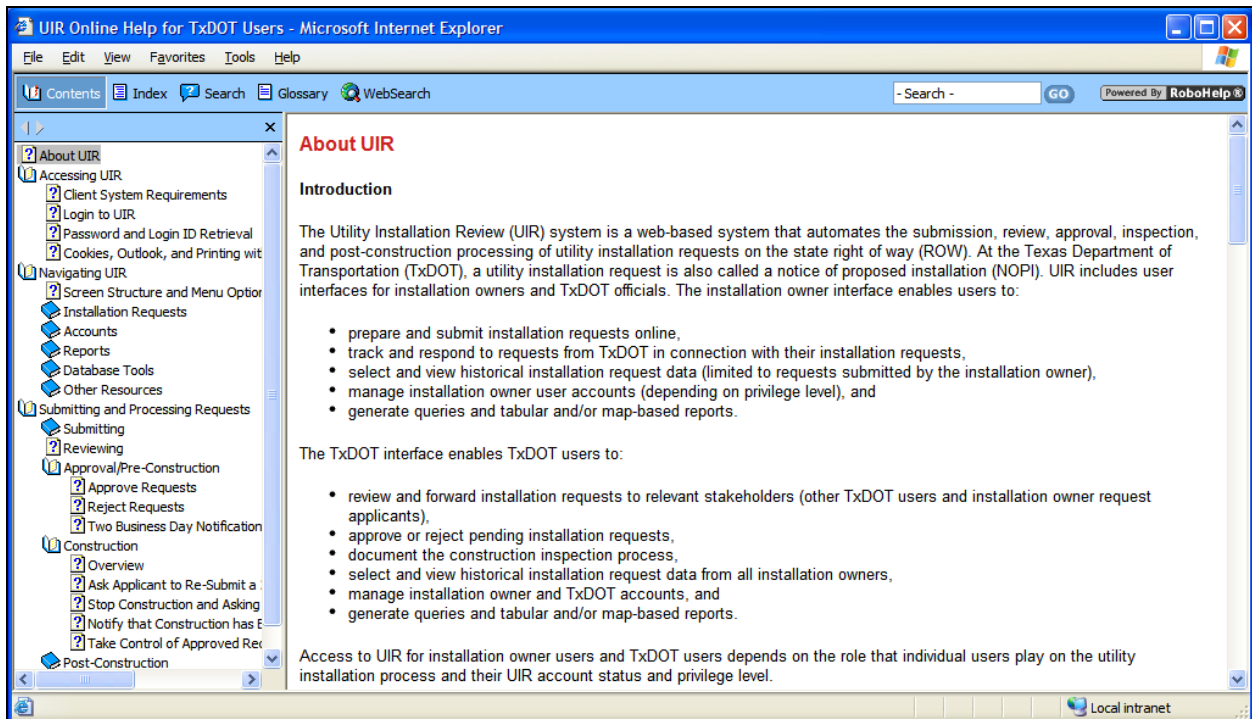

We appreciate your feedback !

Your message will be sent to TxDOT District Utility Permit Office and UIR's webmaster

## UIR Help

- Click **UIR Help** to display the interactive UIR help system.

The screenshot shows a web browser window titled "UIR Online Help for TxDOT Users - Microsoft Internet Explorer". The browser's address bar shows a search bar with the text "- Search -" and a "GO" button. The page content is titled "About UIR" and includes an "Introduction" section. The introduction text states: "The Utility Installation Review (UIR) system is a web-based system that automates the submission, review, approval, inspection, and post-construction processing of utility installation requests on the state right of way (ROW). At the Texas Department of Transportation (TxDOT), a utility installation request is also called a notice of proposed installation (NOPI). UIR includes user interfaces for installation owners and TxDOT officials. The installation owner interface enables users to:"

- prepare and submit installation requests online,
- track and respond to requests from TxDOT in connection with their installation requests,
- select and view historical installation request data (limited to requests submitted by the installation owner),
- manage installation owner user accounts (depending on privilege level), and
- generate queries and tabular and/or map-based reports.

The TxDOT interface enables TxDOT users to:

- review and forward installation requests to relevant stakeholders (other TxDOT users and installation owner request applicants),
- approve or reject pending installation requests,
- document the construction inspection process,
- select and view historical installation request data from all installation owners,
- manage installation owner and TxDOT accounts, and
- generate queries and tabular and/or map-based reports.

Access to UIR for installation owner users and TxDOT users depends on the role that individual users play on the utility installation process and their UIR account status and privilege level.

The left sidebar of the browser window shows a navigation menu with the following items:

- About UIR
- Accessing UIR
  - Client System Requirements
  - Login to UIR
  - Password and Login ID Retrieval
  - Cookies, Outlook, and Printing wit

Below the header is a navigation menu with links for 'About Us', 'Careers', 'Local Information', 'News', 'Programs', and 'Services'. A search bar is located on the right side of the header. The main content area is titled 'TxDOT Right of Way Maps Application' and includes a description of the application, a list of 'Other Resources' (Right of Way, Acquisition Contracts, Forms, Maps Application, Rules for Posting Campaign Signs, Publications, Contact Us), and a section for 'Adobe Acrobat Reader' instructions. A sidebar on the left contains links for 'Citizen', 'Business', 'Government', 'Travel', 'FAQs', 'E-Mail Page', 'Printer-Friendly', 'Enlarge Font', and 'Reduce Font'.

## Survey Control Points

- Click **Survey Control Points** to open a new browser window that points to the Survey Control Point application at TxDOT.

# SUBMITTING AND PROCESSING REQUESTS

## SUBMITTING

### Overview

In the submitting phase, installation owners submit a new installation request (or submit a revised request) to TxDOT. Submitting a new installation request (or submitting a revised request) involves six steps:

- *Request checklist.* This step involves providing answers and comments in response to a series of questions designed to improve the quality of the documentation submission.
- *Basic information.* This step involves providing basic information about the proposed installation.
- *Attach files.* This step involves uploading supporting documentation to the server and converting the uploaded documents to PDF format.
- *Find location.* This step involves using an interactive map to place the location of the proposed installation on the map and extracting route, control section, area office, and maintenance section data from the map.
- *View summary.* This step involves reviewing the documentation provided in the previous steps.
- *Submit request.* This step involves generating the installation request document in PDF format and officially submitting the request to TxDOT.

A summarized description of each step follows. For a more detailed description, including specific requirements and restrictions for file attachments and placing locations on the interactive map, see the [Submitting and Processing Requests](#) chapter under [Part A. Installation Owner User Manual](#).

## Request Checklist

This step involves providing answers and comments in response to a series of questions designed to improve the quality of the documentation submission.

<b>1-Request Checklist</b>	2-Basic Information	3-Attach Files	4-Find Location	5-View Summary	6-Submit Request
<b>Answer questions and add comments as needed</b>					
Yes <input checked="" type="radio"/>	No <input type="radio"/>	N/A <input type="radio"/>	Is the location and identification (highway number) of the TxDOT highway clearly indicated on the plans?		
Comment: Plans show the highway number.					
Yes <input checked="" type="radio"/>	No <input type="radio"/>	N/A <input type="radio"/>	Are the utility plans legible, drawn to scale, and accurately dimensioned?		
Comment:					
Yes <input checked="" type="radio"/>	No <input type="radio"/>	N/A <input type="radio"/>	Is the location of the proposed utility line clearly shown on the plans?		
Comment:					
Yes <input checked="" type="radio"/>	No <input type="radio"/>	N/A <input type="radio"/>	Are other existing utility lines in the vicinity shown on the plans?		
Comment: Both underground and aboveground existing lines are shown.					
Yes <input checked="" type="radio"/>	No <input type="radio"/>	N/A <input type="radio"/>	Are the right of way line and edge of highway pavement clearly shown on plans?		
Comment: The plans clearly show the state property line and the existing edge of pavement.					
Yes <input type="radio"/>	No <input type="radio"/>	N/A <input checked="" type="radio"/>	For lines to be installed parallel to the highway, is the distance from the right of way line and from the edge of highway pavement clearly shown?		
Comment: The proposed installation is a crossing.					
Yes <input type="radio"/>	No <input type="radio"/>	N/A <input checked="" type="radio"/>	For installations parallel to the highway, does the installation alignment change? Alignment changes need to be justified and reasonable.		
Comment: The proposed installation is a crossing.					
Yes <input type="radio"/>	No <input type="radio"/>	N/A <input checked="" type="radio"/>	Are appropriate temporary erosion control devices (e.g., rock berms, silt fences) shown where the line will be across/along a creek, drainage way, steep slope, within the Edwards Aquifer Recharge Zone, or in other critical areas?		
Comment:					
Yes <input type="radio"/>	No <input type="radio"/>	N/A <input checked="" type="radio"/>	For aerial installations, do the plans clearly show and differentiate between existing poles and new poles?		
Comment:					
Yes <input checked="" type="radio"/>	No <input type="radio"/>	N/A <input type="radio"/>	For highway crossings, is the location of the crossing clearly shown on the plans? The crossing should be as close to 90 degrees as practical.		
Comment:					
Yes <input checked="" type="radio"/>	No <input type="radio"/>	N/A <input type="radio"/>	For lines crossing the highway, crossing intersecting streets/county roads, or passing through the protected root area of desirable trees, is it clearly shown that the line will be installed by boring? In addition, casing should be shown under highways and paved city street/county road intersections.		
Comment:

**Select one of the following options**

Edit Request	Click 1, 2, 3, or 4 above
Submit Application	After clicking Submit Request, the system will generate the request document in PDF format ( <a href="#">click here for a preview</a> ) and will send emails to TxDOT officials and you. There is no need to send a separate, signed paper copy to TxDOT. You can download the PDF file for your own records.

I agree (You must check "I agree" to submit application)

Submit Application

After submitting the request to TxDOT, the installation owner user interface displays the request as Submitted and users can click the installation request number to open and view all the data and documentation, including the notice of proposed installation PDF file, associated with the new submission.

## REVIEWING

After submitting the installation request, TxDOT officials proceed with the review of the proposed installation. While the user interface for TxDOT users involved in the installation review process varies somewhat depending on user role and privilege level (primarily with respect to menu options), the actual online review form (i.e., the form that users see when they open an installation request) is the same. The only difference is the drop down menu options available to individual users when routing an installation request to other users. Note: The approval form (only accessible to users in the utility permit approval office) includes additional options that pertain to the approval activity (see [Approval/Pre-Construction](#)).

In general, the review process includes the following activities:

- General monitoring. At any point during the review process, TxDOT users can access installation requests. In general, the access is read-only unless the user has received control of an installation request from a previous user.
  - Click **My District Requests** in the Installation Requests menu box to display a list of active requests submitted to the same TxDOT district, grouped by maintenance section.
  - Click **Approved Requests** in the Installation Requests menu box to display a list of active requests that have an approval status, grouped by maintenance section.
  - Click **Closed Requests** in the Installation Requests menu box to display closed requests, grouped by maintenance section.

San Antonio District - My District Requests

Requests Currently at TxDOT (3) [Hide/Show]							
Dist App No.	Installation Request No.	Maintenance Section	Highway	Installation Owner	Currently at	Action Needed	Last Event
erwt	SAT20071120085011	Northeast	SL0368	UIR TTI Testing	District Maintenance Office	Approve/reject application	11-21-2007
	SAT20071120101322	West Bexar	SH0016	UIR TTI Testing	Utility Permit Office	Conduct initial review	11-22-2007
	SAT20071124114951	Bexar Metro	SS0117	UIR Utility Testing Company	Utility Permit Office	Conduct initial review	11-24-2007

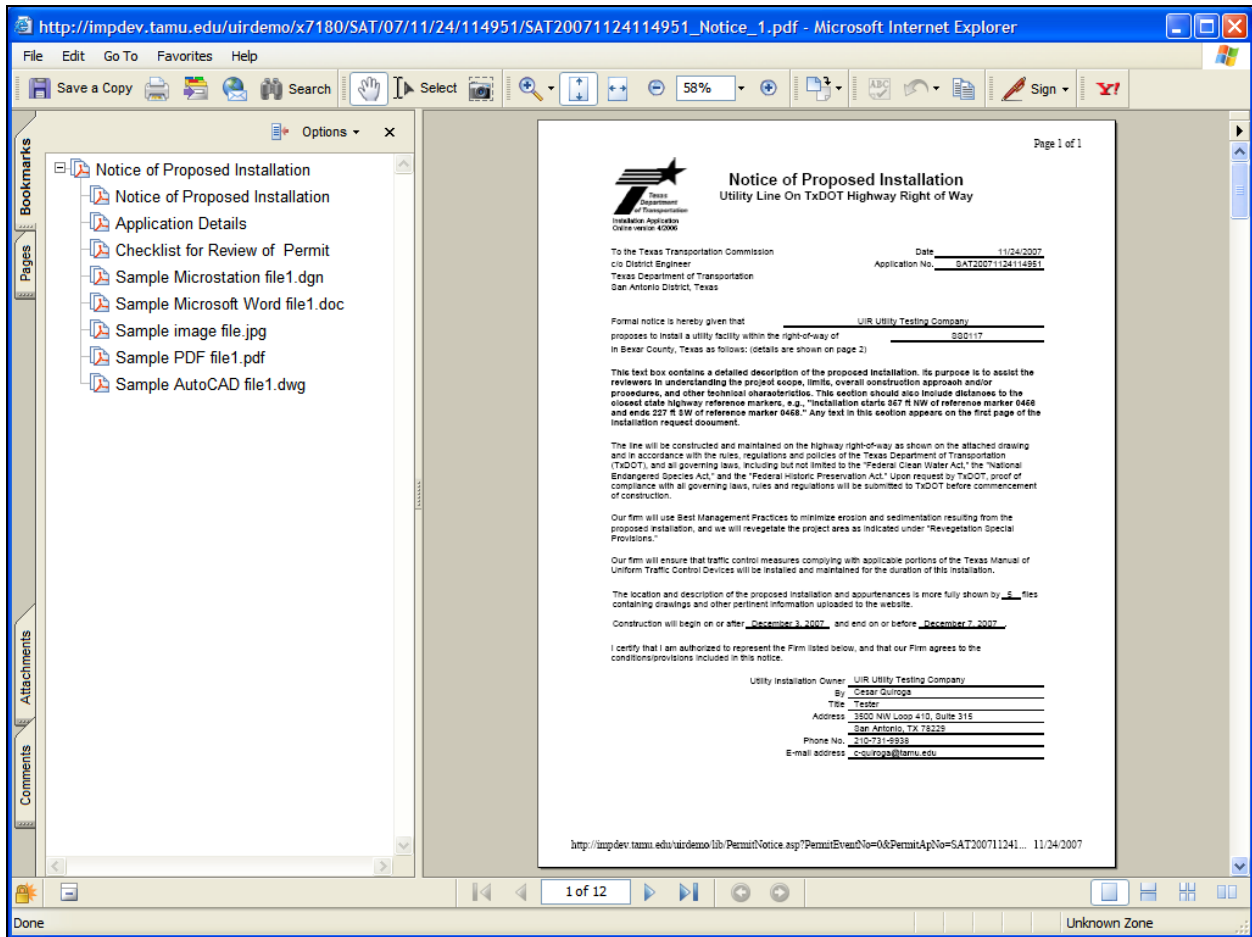

- After finding the installation request of interest, click the installation request number to load the data associated with the request.
- As needed, review the **Basic Information** and **Event History** screens. Note: The **Conduct Action** button is disabled unless the user has control of the installation request at that point in time.
- For users who have received a request at any point during the review process (typically those users have received an automated email from UIR asking them to conduct a review):
  - Click **My Requests** (or **Home**). By default, this view shows all the requests that are ready for the designated user’s review. Note: Newly submitted requests (i.e., installation requests that are ready for initial review) are visible under **My Requests** to all utility permit office users. UIR does not “pre-assign” newly submitted requests to individual utility permit office users because different TxDOT districts have different request assignment policies, making automated assignment difficult. However, once a utility permit office user opens and completes the initial review of a request (i.e., the user has routed the request), the system will recognize that user as the “designated” utility permit office user for that request.

San Antonio District - My Requests (2)						
Dist App No.	Installation Request No.	Maintenance Section	Highway	Installation Owner	Action Needed	Last Event
	SAT20071124114951	Bexar Metro	SS0117	UIR Utility Testing Company	Conduct initial review	11-24-2007
	SAT20071120101322	West Bexar	SH0016	UIR TTI Testing	Conduct initial review	11-22-2007

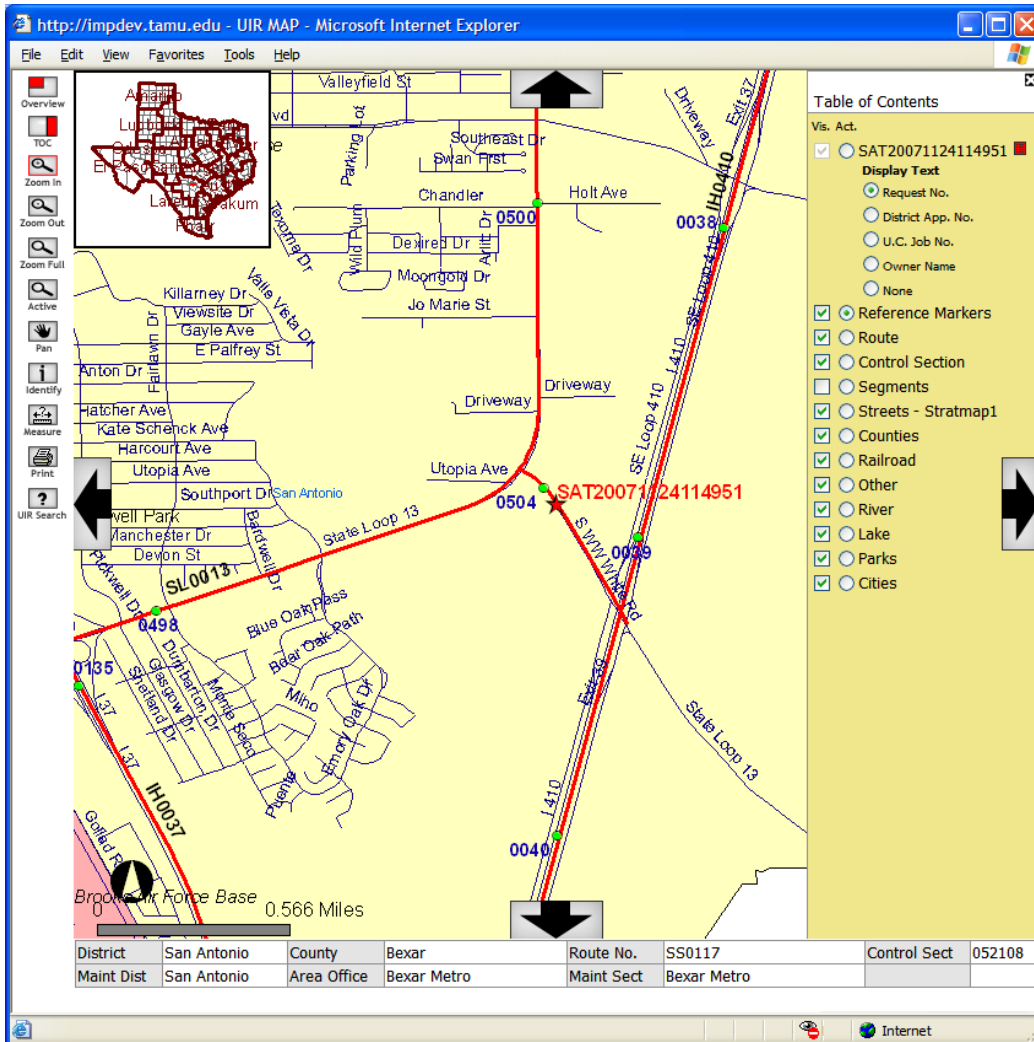

- Alternatively, click **My Office Requests** to view all the requests that are ready for review by any user in the same office. This view can be useful in situations where a specific user is unavailable (e.g., on vacation). By default, any user in the same office can open, review, and process any installation request that is listed in **My Office Requests**.
- Click the installation request number to load the data associated with the request. By default, the screen shows the **Basic Information** screen.

SAT20071124114951		Basic Information	Event History	Conduct Action	Go back
<b>Basic Information</b>					
Installation Request No.	SAT20071124114951				
District Application No.					
Installation Owner Job No.	UTC 2007-01				
Applicant Name	Cesar Quiroga				
Contact Information	c-quiroga@tamu.edu - 210-731-9938				
Installation Owner Name	UIR Utility Testing Company				
Office Name	San Antonio Office 1				
Proposed Construction Schedule	Begin on: 12-03-2007		Finish on: 12-07-2007		
Request Type	Regular Installation Request				
Installation Purpose	Public Utility Installation				
Installation Class	Telephone				
Installation Location	Buried				
Description	This text box contains a detailed description of the proposed installation. Its purpose is to assist the reviewers in understanding the project scope, limits, overall construction approach and/or procedures, and other technical characteristics. This section should also include distances to the closest state highway reference markers, e.g., "installation starts 357 ft NW of reference marker 0456 and ends 227 ft SW of reference marker 0458." Any text in this section appears on the first page of the installation request document.				
Special Comments	This text box is used to provide additional relevant information, e.g., if this request is part of a large project that involves several requests (in this case, the user would list all installation request numbers: SAT20071120083012, SAT20071120100512, and so on).

- Review the **Basic Information** screen as needed, including the following:
  - *Content.* Review all the information provided, including the proposed construction schedule and the description.
  - *Linked files.* To view a linked file, either left-click the hyperlink to open the file directly or right-click the link and select “Save Target As” to save a copy of the file locally. For example, to view the notice of proposed installation PDF file, click **View Notice (PDF)**. To view the permit checklist and the installation owner user’s answers, click **Show Permit Checklist Answers**.

- *Map.* To view a map that displays the location of the proposed installation, click **View Map**.

- Click **Event History** to display the list of transactions that have occurred in connection with the installation request. This screen includes two expandable views:
  - *Statistics*. This view provides a summary of the number of days an installation request has spent between major milestones during the installation review, construction, and post-construction phases. To show or hide the statistics view, click [\[Show/Hide\]](#).
  - *Event History*. This view provides a summary of installation request events in reverse chronological order. To expand or collapse the event history, click [\[Collapse/Expand\]](#).

- Consider the following while routing the request to another user:
  - *District application number.* This field must be completed during the initial review. In the current version of UIR, the field is a text box. Different districts follow different procedures to assign request numbers,

making automated numbering more difficult. A future version will likely provide the ability to choose from a drop down list.

- *Request type and installation purpose.* By default, the interface shows what the installation owner user selected. However, a utility permit office user can override the selection.
  - *Inspection office and inspector.* At any point during the review process, a TxDOT user (e.g., an area engineer) can select the inspector who should be in charge of inspecting the installation in the field. Selection of an inspector is mandatory during the approval phase. Before approval, it is optional (although recommended to ensure a balanced inspection load among all inspectors).
  - *Route to and action needed.* The options available depend on where the installation request is in the review process. For additional information, see the UIR [installation request workflow diagram](#).
  - *Review comments.* Provide as much information as possible, although brief and to the point, for the next user down the review path to conduct a proper action. It is *not* advisable to leave the field blank because the result could be confusion on the part of the recipient.
  - *Special provisions.* At any point during the review process, a TxDOT user (e.g., an area engineer) can select special provisions to attach to the approval form. Selection of a special provision is optional, even during the approval phase.
  - *Attach files.* At any point during the review process, a TxDOT user can attach files to provide additional documentation during the review process. Examples include digital pictures taken in the field, additional requirements, and letters from the district maintenance engineer. Files uploaded during the review phase can be accessed through the **Event History**.
- When finished, click **Submit Review** to route the request to the next user. UIR updates the status of the request, adds one event to the event history, and sends an automated email to the next user. After the request is routed, the request is no longer visible on **My Requests** or **My Office Requests**. However, the request remains available at any point on **My District Requests** as long as the request is active (closed requests are visible under **Closed Requests**).

## APPROVAL/PRE-CONSTRUCTION

### Approve Requests

During the approval phase, a designated TxDOT official (from the utility permit approval office) approves the proposed installation and routes the approval form along with any relevant special provisions to the installation owner user for further processing. UIR also sends an email to the applicant, the designated inspector, and any email recipient that the applicant added in Step 6 while submitting the installation request.

To approve a request:

- Click **My Requests** in the Installation Requests menu.

San Antonio District - My Requests (2)

Approval Form  
Older version 11/20/06

<p>To: Cesar Quiroga UIR Utility Testing Company 3900 NW Loop 410, Suite 318 San Antonio, TX 78225</p>	<p>Date: 11/25/2007 Application No. SAT20071124114951 District App. No. TE-07-43 Highway 28117 Control Section 281108 Maintenance Section Bear Mello County Bexar</p>
--	---

TxDOT offers no objection to the location on the right-of-way of your proposed utility installation, as described by Notice of Proposed Utility Installation No. SAT20071124114951 (District Application No. TE-07-43) dated 11/25/2007 and accompanying documentation, except as noted below.

**No work on weekends. Restore ROW to original condition.**

When installing utility lines on controlled access highways, your attention is directed to governing laws, especially to Texas Transportation Code, Title 8, Chapter 203, pertaining to Modernization of State Highways, Controlled Access Highways. Access for serving this installation shall be limited to access via (a) frontage roads where provided, (b) nearby or adjacent public roads or streets, (c) trails along or near the highway right-of-way lines, connecting only to an intersecting road; from any one or all of which entry may be made to the outer portion of the Highway right-of-way for normal service and maintenance operations. The installation Owner's rights of access to the through-traffic roadways and ramps shall be subject to the same rules and regulations as apply to the general public except, however, if an emergency situation occurs and usual means of access for normal service operations will not permit the immediate action required by the Utility Installation Owner in making emergency repairs as required for the safety and welfare of the public, the Utility Owners shall have a temporary right of access to and from the through-traffic roadways and ramps as necessary to accomplish the required emergency repairs, provided TxDOT is immediately notified by the Utility Installation Owner when such repairs are initiated and adequate provision is made by the Utility Installation Owner for convenience and safety of highway traffic.

The installation shall not damage any part of the highway and adequate provisions must be made to cause minimum inconveniences to traffic and adjacent property owners, in the event the installation Owner fails to comply with any or all of the requirements as set forth herein, the State may take such action as it deems appropriate to compel compliance.

It is expressly understood that the TxDOT does not purport, hereby, to grant any right, claim, title, or easement in or upon this highway, and it is further understood that the TxDOT may require the Installation Owner to relocate this line, subject to provisions of governing laws, by giving thirty (30) days written notice.

If construction has not started within six (6) months of the date of this approval, the approval will automatically expire and you will be required to submit a new application. You are also requested to notify this office prior to commencement of any routine or periodic maintenance which requires pruning of trees within the highway right-of-way, so that we may provide specifications for the extent and methods to govern in trimming, topping, tree balance, type of cuts, painting cuts and clean up. These specifications are intended to preserve our considerable investment in highway planting and beautification, by reducing damage due to trimming.

**Special Provisions:**  
**San Antonio District Special Provisions**

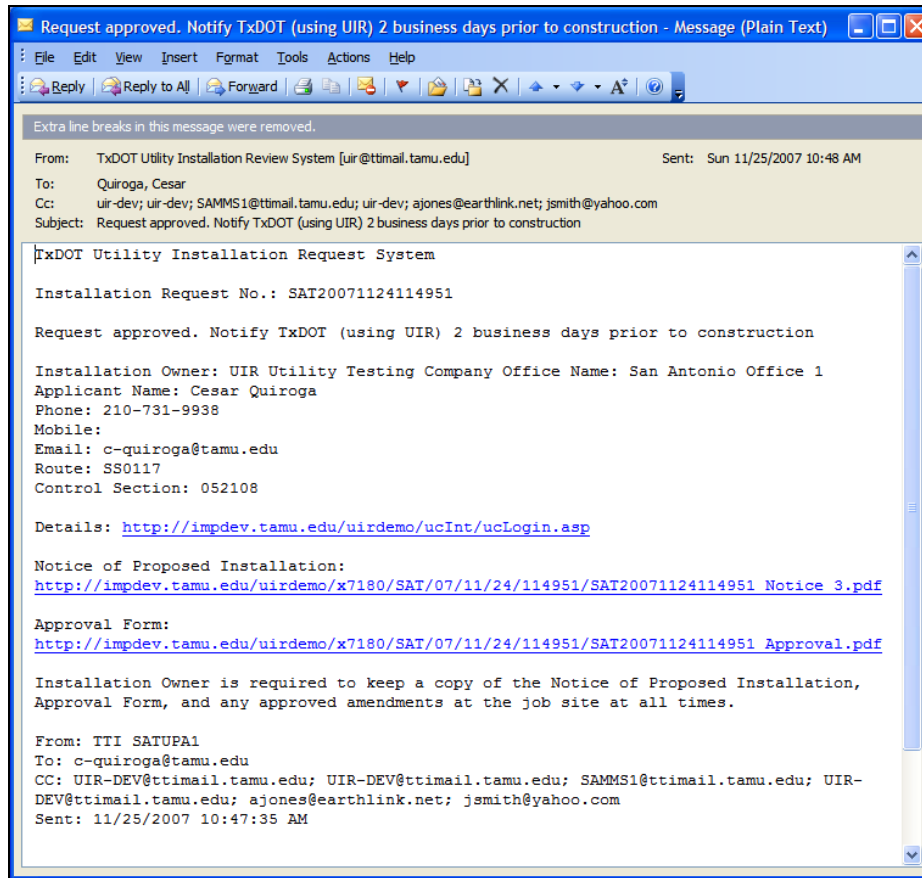

You are required to notify TxDOT 48 hours (2 business days) before you start construction to allow for proper inspection and coordination of work days and traffic control plans. Use the UIR website for the 48-hour notification. DO NOT start construction until you have coordinated the construction start date and inspection with TxDOT. You are also required to keep a copy of this Approval, the Notice of Proposed Installation, and any approved amendments at the job site at all times.

Done Unknown Zone

## Reject Requests

The approval user interface also enables the TxDOT user to reject installation requests, e.g., if the proposed installation does not comply with the utility accommodation rules or if a different protocol would be necessary (e.g., in the case of bridge attachments).

From a procedural standpoint, the only difference between approvals and rejections is that rejections are routed to the closed permit box (the system will automatically send an email to the applicant), whereas approvals are routed to the applicant.

To reject a request:

- Click **My Requests** in the Installation Requests menu.
- Click the installation request number of interest to load the data associated with the request.
  - Review the **Basic Information** as needed.
  - Review the **Event History** as needed.
  - Click **Conduct Action** to complete the information needed for the rejection. In particular, under Route To, select the options to send the request to the closed permit box.

- When finished, click **Submit Review** to route the request to the closed permit box. The system automatically sends an email to the applicant. After the request is routed, the request is no longer visible on **My Requests** or **My Office Requests**, but it will be visible on **Closed Requests**.

## **2-Business Day Notification Prior to Construction**

At least 2 business days prior to starting construction, the installation owner user (or another duly authorized installation owner user) must notify TxDOT—using UIR—that construction is about to commence. During the notification process, UIR sends an email to the designated TxDOT inspector who then coordinates with the installation owner user details such as the actual construction schedule and traffic control plans.

## **CONSTRUCTION**

### **Overview**

After the TxDOT inspector receives the 2-business day notification (via UIR), the status of the installation request in UIR becomes “Construction.” By default, during the construction phase, the TxDOT inspector has control of the installation request in UIR. In general, the TxDOT inspector has the following UIR interface options:

- Ask the installation owner user to re-submit the 2-business day notification to TxDOT at a later date. This option may be necessary if, for example, TxDOT is conducting maintenance work on the ROW that might prevent the installation owner’s construction activities from starting. If the inspector chooses this option, UIR will transfer control of the installation request to the applicant (i.e., when the applicant opens the request, the **Conduct Action** button becomes enabled).
- Stop construction and ask the installation owner user to submit an amendment request. This option might be necessary if, in the opinion of the inspector, the conditions on the ground are such that an amendment to the previously approved proposal is warranted. Examples of potential conditions include the determination of the need for significant changes in horizontal alignment, vertical alignment, and/or construction schedule. If the inspector chooses this option, UIR will transfer control of the installation request to the applicant (i.e., when the applicant opens the request, the **Conduct Action** button becomes enabled).
- Notify the utility permit office that construction has ended. The TxDOT inspector chooses this option if, in the opinion of the inspector, construction has finished completely (i.e., there are no pending construction items or temporary utility adjustments, and the finished installation meets all relevant specifications, rules, and regulations, including the Utility Accommodation Rules). If the inspector chooses this option, UIR changes the status of the installation request to “Post-construction” and transfers control of the installation request to the TxDOT district utility permit office for further processing.

## Ask Applicant to Re-Submit a 2-Business Day Notification

To ask the installation owner user to re-submit the 2-business day notification to TxDOT at a later date:

- Click **My Requests** in the Installation Requests menu.

San Antonio District - My Requests (1)						
Dist App No.	Installation Request No.	Maintenance Section	Highway	Installation Owner	Action Needed	Last Event

<b>Event 10</b>	Ready to start construction / Conduct inspection
When	11/25/2007 10:57:49 AM
By	Cesar Quiroga (UIR Utility Testing Company, San Antonio Office 1) - cquiroga440
Send to	TTI SATMS1 (TxDOT, Bexar Metro Maintenance Section) - satms1
Comment	Our construction crew is ready to start construction. Our traffic control plan is ready for your review and approval. Please coordinate with one of our construction coordinators (Paul Smith, 210-456-9093, or Jane Wilson, 210-456-9045).
<b>Event 9</b>	Request approved / Request approved. Notify TxDOT (using UIR) 2 business days prior to construction
When	11/25/2007 10:47:35 AM
By	TTI SATUPA1 (TxDOT, District Maintenance Office) - satupa1
Send to	Cesar Quiroga (UIR Utility Testing Company, San Antonio Office 1) - cquiroga440
Comment	No work on weekends. Restore ROW to original condition.
Approval Form	<a href="#">View Approval Form</a>
<b>Event 8</b>	Review completed / Approve/reject application
When	11/25/2007 10:45:07 AM
By	TTI SATUPO1 (TxDOT, Utility Permit Office) - satupo1
Send to	TTI SATUPA1 (TxDOT, District Maintenance Office) - satupa1
Comment	Approval is recommended.

- Click **Conduct Action**.
- Select the applicant in the routing options.
- Select “Re-notify TxDOT (using UIR) 2 business days prior to construction.”
- Add comments as appropriate
- When finished, click **Submit Review** to route the request to the applicant. When the applicant opens the installation request, that user will have the ability to transfer control of the installation request back to the designated inspector.

## Stop Construction and Ask Applicant to Submit an Amendment Request

To stop construction and ask the installation owner user to submit an amendment request:

- Click **My Requests** in the Installation Requests menu.
- Click the installation request number of interest to load the data associated with the request.
  - Review the **Basic Information** as needed.
  - Review the **Event History** as needed.
  - Click **Conduct Action**.
  - Select the applicant in the routing options.
  - Select “Stop construction. Submit amendment.”
  - Add comments as appropriate.
  - When finished, click **Submit Review** to route the request to the applicant. When the applicant opens the installation request, that user will have the ability to prepare an amendment request and route it to the utility permit office for review. As with the original submission, the review may include routing the amendment request to appropriate TxDOT offices and, if needed, back to the user who submitted the amendment request for clarification or additional/revised documentation. If TxDOT approves the amendment request, a designated TxDOT official routes the approval form along with any relevant special provisions to the installation owner user for further processing.

## Notify that Construction has Ended

To notify the utility permit office that construction has ended:

- Click **My Requests** in the Installation Requests menu.
- Click the installation request number of interest to load the data associated with the request.
  - Review the **Basic Information** as needed.
  - Review the **Event History** as needed.
  - Click **Conduct Action**.
  - Select a user in the utility permit office in the routing options. Hint: Select the same official who conducted the review of the installation request prior to approval.
  - Select “Conduct post-construction review.”
  - Add comments as appropriate.
  - When finished, click **Submit Review** to route the request to the utility permit office.

## Take Control of Approved Requests

The UIR interface enables certain TxDOT district users (e.g., utility permit office users and inspectors) to open approved requests and “take control” of those requests, which may be useful in situations where the installation owner user did not notify TxDOT before construction. Taking control of a request moves a request from the installation owner user to the designated TxDOT inspector so that inspection can take place.

To take control of an approved request:

- Click **Approved Requests** in the Installation Requests menu box.
- Search for a specific installation request or navigate through the list of requests currently at installation owner until finding the request of interest. Note: Approved requests currently at TxDOT are already under the control of a TxDOT inspector and, therefore, are not subject for the “take control” procedure.
- Click the installation request number of interest to load the data associated with the request.
  - Review the **Basic Information** as needed.
  - Review the **Event History** as needed.
  - Click **Take Control**.
  - Select the TxDOT inspector that should conduct the inspection.

- Describe the reasons to take control of the approved request.
- When finished, click **Submit** to route the request to the inspector selected. After the request is routed, the request is no longer visible under **Approved Requests**, but remains accessible for all TxDOT users under **My District Requests**. The inspector selected also sees the request under **My Requests** and **My Office Requests**.

## POST-CONSTRUCTION

### Request As-built Certification

After the TxDOT field inspector notifies the district utility permit office that construction has ended, this office requests the installation owner to submit an as-built certification online.

To request an as-built certification:

- Click **My Requests** in the Installation Requests menu box.
- Click an installation request number for which the action needed is “Conduct post-construction review” to load the data associated with the request.

San Antonio District - My Requests (2)

## Close Completed Request

After the submission and review of the as-built certification, the utility permit office archives the completed request. Archiving the completed request involves routing the request to the closed permit box and changing the status of the request to “Completed.”

To close a complete request:

- Click **My Requests** in the Installation Requests menu box.
- Click an installation request number for which the action needed is “Conduct as-built review” to load the data associated with the request.

San Antonio District - My Requests (2)

<b>Event 13</b>	Submitting as-built certification / Conduct as-built review
When	11/25/2007 11:36:26 AM
By	Cesar Quiroga (UIR Utility Testing Company, San Antonio Office 1) - cquiroga440
Send to	TTI SATUPO1 (TxDOT, Utility Permit Office) - satupo1
Comment	In this example, the user is certifying that the as-built facility matches the approved documentation and, therefore, as-built plans are not necessary. If there had been changes on the ground compared to the approved alignment, the user would need to select the second option and attach as-built files. We constructed this utility installation according to the description, construction plans, special provisions, and other related documents, as described in the Notice of Proposed Installation, Approval Form, and approved amendments. We also maintained field representation during installation of this utility.

## MISCELLANEOUS ADMINISTRATIVE FUNCTIONS

### DISTRICT LEVEL

TxDOT district users with an administrator privilege have the responsibility to manage incomplete requests, purge requests, rollback requests, take control of approved requests, and manage installation owner accounts. Particularly in the case of incomplete requests, approved requests, and installation owner accounts, those users need to monitor the system on a regular basis to prevent build up of certain database tables and folders on the server side that could, over time, degrade performance of the system. A list of maintenance activities at the district level follows.

Function	UIR Interface	Activity	Frequency
Manage incomplete requests	Yes	Monitor incomplete request list	Weekly
Manage incomplete requests	Yes	Delete new incomplete requests that are at least two weeks old	Monthly
Manage incomplete requests	Yes	Delete new incomplete responses to TxDOT that are at least two weeks old (only deletes the response, not the originally submitted request)	Monthly
Purge requests	Yes	Purge request (only under extraordinary circumstances)	Rarely
Rollback requests	Yes	Rollback request	Rarely
Take control of approved requests	Yes	Take control of approved request, in consultation with the affected TxDOT inspector(s)	Weekly
Manage installation owner accounts	Yes	Approve and/or edit installation owner accounts	As needed
Manage installation owner accounts	Yes	Check for duplicate office names	Monthly
Manage installation owner accounts	Yes	Consolidate duplicate office user accounts	Monthly
Manage installation owner accounts	Yes	Delete user accounts that have never submitted an installation request through UIR	Yearly
Manage installation owner accounts	Yes	Delete offices where no user has ever submitted an installation request through UIR	Yearly

### DISTRICT/DIVISION SECURITY ADMINISTRATORS

District and division security administrators have the responsibility to manage TxDOT user accounts within their respective TxDOT units, including creating user accounts, editing user accounts, and deleting user accounts (if the accounts were never involved in the installation request review process). A list of maintenance activities in connection with TxDOT user accounts in UIR follows.

<b>Function</b>	<b>UIR Interface</b>	<b>Activity</b>	<b>Frequency</b>
Manage TxDOT offices	Yes	Monitor list of offices	Monthly
Manage TxDOT offices	Yes	Create and/or edit offices, in consultation with district and/or division personnel involved in the installation request review process	As needed
Manage TxDOT offices	Yes	Delete offices that were never involved in the installation request review process, in consultation with appropriate district and/or division personnel	Yearly
Manage TxDOT accounts	Yes	Monitor list of accounts	Monthly
Manage TxDOT accounts	Yes	Create and/or edit user accounts, in consultation with district and/or division personnel involved in the installation request review process	As needed
Manage TxDOT accounts	Yes	Change the status of user accounts to Permanently Inactive, in consultation with district and/or division personnel involved in the installation request review process	Monthly
Manage TxDOT accounts	Yes	Delete user accounts that were never involved in the installation request review process, in consultation with appropriate district and/or division personnel	Yearly

## **INFORMATION SYSTEMS DIVISION SECURITY ADMINISTRATORS**

In addition to the management of offices and accounts within ISD (see [District/Division Security Administrators](#)), ISD personnel have the responsibility to manage all the system components associated with UIR (including hardware and software components) and activate districts (including managing district security administrator accounts). A list of related maintenance activities follows.

<b>Function</b>	<b>UIR Interface</b>	<b>Activity</b>	<b>Frequency</b>
Manage TxDOT units	Yes	Monitor TxDOT unit security administrator list	Monthly
Manage TxDOT units	Yes	Activate new TxDOT unit, including creating a security administrator account for that unit	Once
Manage TxDOT units	Yes	Edit TxDOT unit security administrator account, in consultation with district and/or division personnel involved in the installation request review process	As needed
Manage TxDOT units	Yes	Delete TxDOT unit security administrator account, in consultation with district and/or division personnel involved in the installation request review process	Yearly
Manage attachment files	No	Delete all files in the Error-bin folder located (located in the <Installation drive>:\ArcIMS\FILE_UPLOAD\ folder)	Weekly
Manage UIR reports	No	Delete report files in the Report-bin folder (located in the <Installation drive>:\ArcIMS\FILE_UPLOAD\ folder).	Monthly

<b>Function</b>	<b>UIR Interface</b>	<b>Activity</b>	<b>Frequency</b>
Manage UIR installation requests	No	Delete records in the PRMT and PRMT_CHKLIST_ANS tables if there is no corresponding record in the PRMT_EVNT table (Warning: Only users with extensive database administration skills should perform this function)	Monthly
Manage installation owner records	No	Delete records in the In UTIL_CMPNY table if there no corresponding record in the UTIL_CMPNY_OFFC table (Warning: Only users with extensive database administration skills should perform this function)	Quarterly
Manage installation owner office records	No	Delete records in the UTIL_CMPNY_OFFC table if there is no corresponding record in the UTIL_CMPNY_USER_PROFL table (Warning: Only users with extensive database administration skills should perform this function)	Quarterly
Manage TxDOT units	No	When activating a new TxDOT district, manually append records to the following tables (in that order): TxDOT_OFFC (each TxDOT office in the district) OFFC (each TxDOT office in the district) PLACE (each TxDOT office in the district) OFFC_PLACE (each TxDOT office in the district) PRMT_WRKFL_ACTV (district) DOT_UNIT_ADM (district) (Warning: Only users with extensive database administration skills should perform this function)	Once per district
Manage TxDOT units	No	When activating a new TxDOT district, manually append a record to the following table: DOT_UNIT_ADM This table has 2 attributes: TxDOT_UNIT_ID: Unique ID of the newly activated district. TXDOT_UNIT_ADM_EML: Email address associated with the district. UIR sends a copy of each email it sends out to users to this email address. Having a record of emails sent helps the UIR system administrator verify whether UIR sends emails as intended. Notice that the system still functions normally if the email record for a specific district is blank or if there is no email address record for that district.	Once per district
Manage email log	No	Delete emails in the designated email account associated with each district, that are at least one month old.	Monthly
Manage email log	No	Delete records in the EMAIL_LOG table that are at least one month old.	Monthly
